

Getting started with Machine Learning

HELLO!

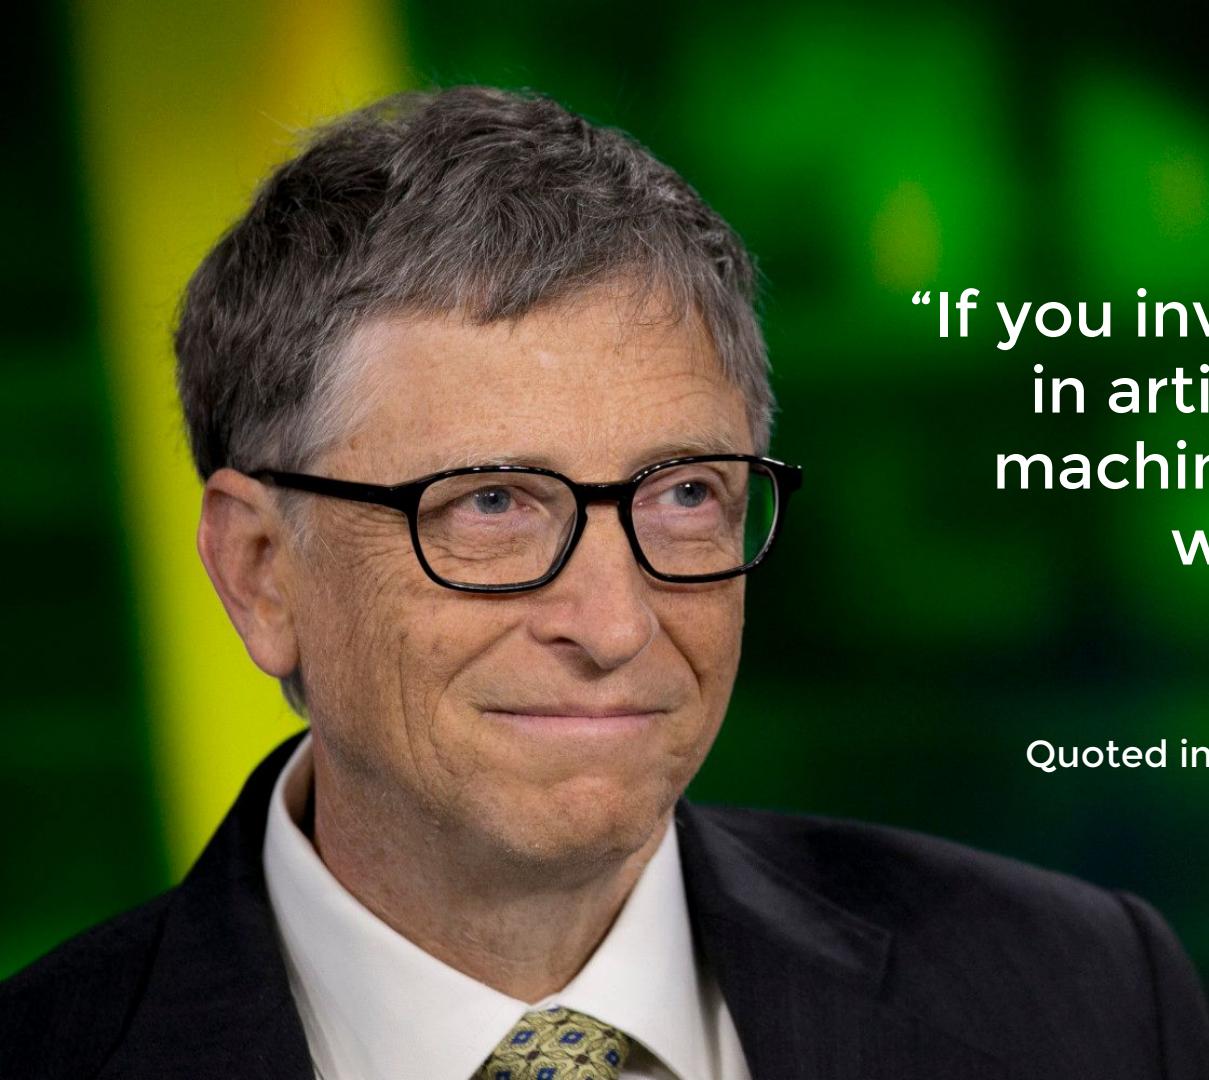

Thomas Paula
Software Engineer
tsp.thomas@gmail.com

Humberto Marchezi
Software Engineer
hcmarchezi@gmail.com

A large, old, rusty industrial machine, possibly a lathe or grinder, sits in the foreground of a dimly lit, abandoned factory. The machine is heavily weathered and shows signs of significant age. In the background, there are large windows, brick walls, and a long hallway leading to a bright exit. The overall atmosphere is one of decay and history.

How could we teach
machines in a way
that they could learn
from experience?

A close-up portrait of Bill Gates, wearing black-rimmed glasses and a dark suit, looking slightly to the right of the camera with a faint smile.

“If you invent a breakthrough
in artificial intelligence so
machines can learn, that is
worth 10 Microsofts.”

Bill Gates

Quoted in NY Times, Monday March 3, 2004

1.

INTRODUCTION

Machine what?

“

► A computer program is said to **learn** from experience E with respect to some class of tasks T and performance measure P , if its performance at tasks in T , as measured by P , improves with experience E .

Tom M. Mitchell

“

► A computer program is said to learn from experience E with respect to some class of tasks T and performance measure P , if its performance at tasks in T , as measured by P , improves with experience E .

Tom M. Mitchell

“

Tom M. Mitchell

“

► A computer program is said to learn from experience E with respect to some class of tasks T and performance measure P , if its performance at tasks in T , as measured by P , improves with experience E .

Tom M. Mitchell

Example

Task T: Classify an e-mail as spam or not spam.

Performance measure P: Percentage of e-mails correctly classified.

Training experience E: E-mails manually labeled by humans.

Learning Paradigms

Supervised Learning

Unsupervised Learning

Supervised Learning

Supervised Learning

This is a pawn!

This is a knight!

This is a king!

Supervised Learning

- ▶ Labeled data;
- ▶ Has a “supervisor”;
- ▶ Classifies unseen instances (classification) or predicts values (regression).

Unsupervised Learning

Unsupervised Learning

Smaller than others, with a ball on the top:
group 0!

Not conic, nothing
on the top: group 1!

Higher than others,
with cross on the top:
group 2!

Unsupervised Learning

Unsupervised Learning

- ▶ No labeled data;
- ▶ No “supervisor”;
- ▶ Finds the regularities in the input.

Task Categories

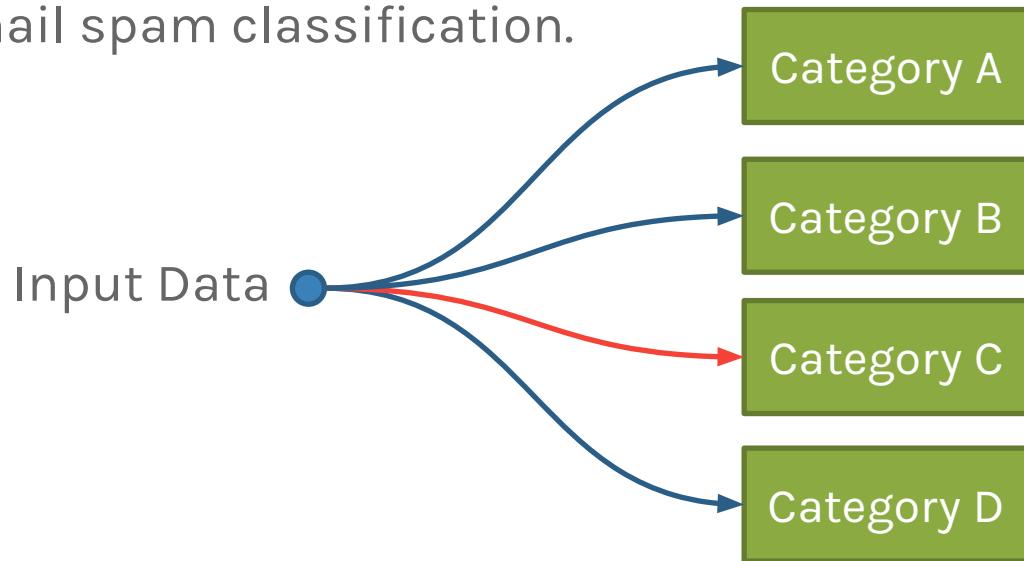

Classification

Regression

Clustering

Classification

- ▶ Classifies a given element in a category;
- ▶ Output as discrete labels (categories);
- ▶ Email spam classification.

Classification

From: fake@watches.com
To: my@email.com

Fake Watches Advertising

Don't miss the chance !
Buy fake watches right now !

Click here

Not spam

Spam

Classification

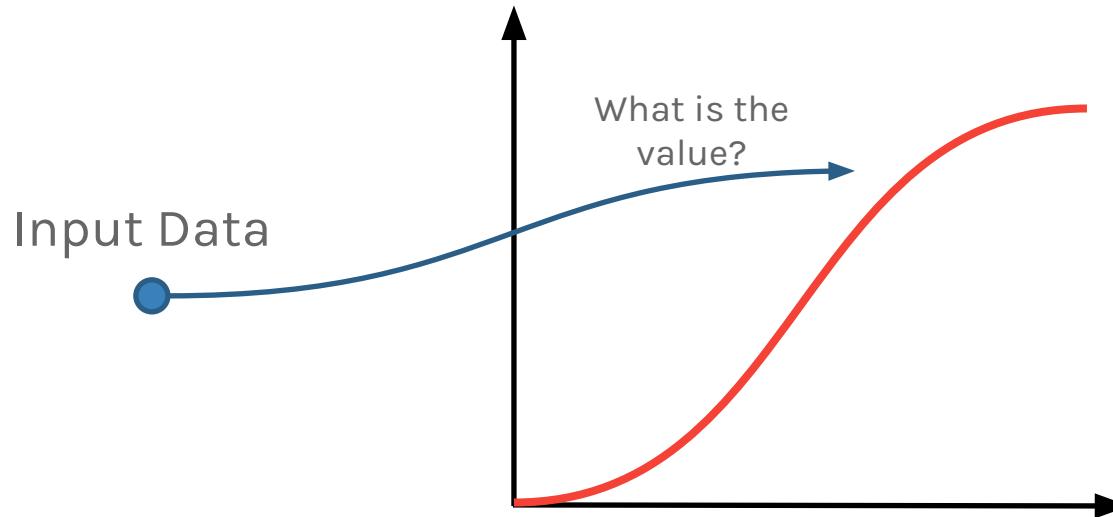

Human

Car

Tree

Regression

- ▶ Forecast/projection of given element
- ▶ Output as continuous values
- ▶ Predict house price given its features

Regression

House features

Area crime rate: 2.5

Bedrooms: 5

Age: 45

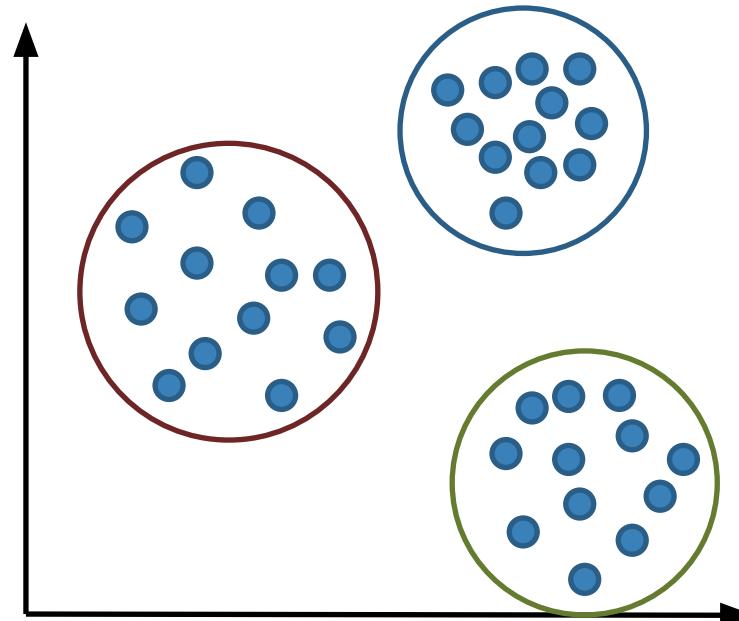

Dist. to business district: 8

House value

USD 303,365.00

Clustering

- ▶ Find groups from a dataset of elements
- ▶ Related news in websites

Clustering

2. ALGORITHMS

The fun part ☺

Linear Regression

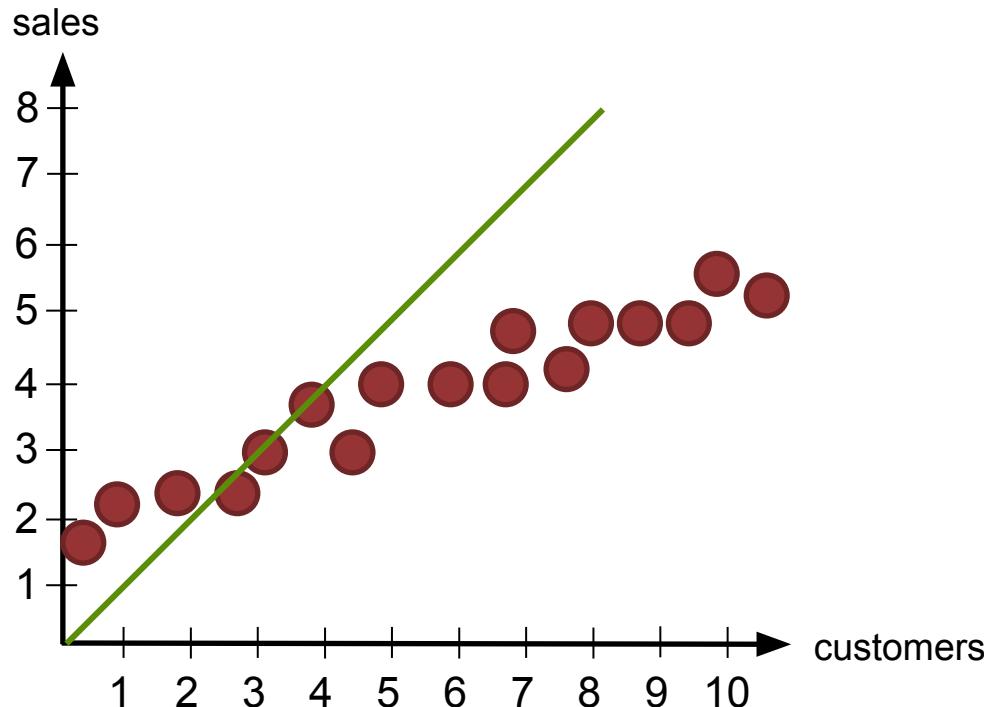

- ▶ Supervised learning;
- ▶ Regression.

Linear Regression

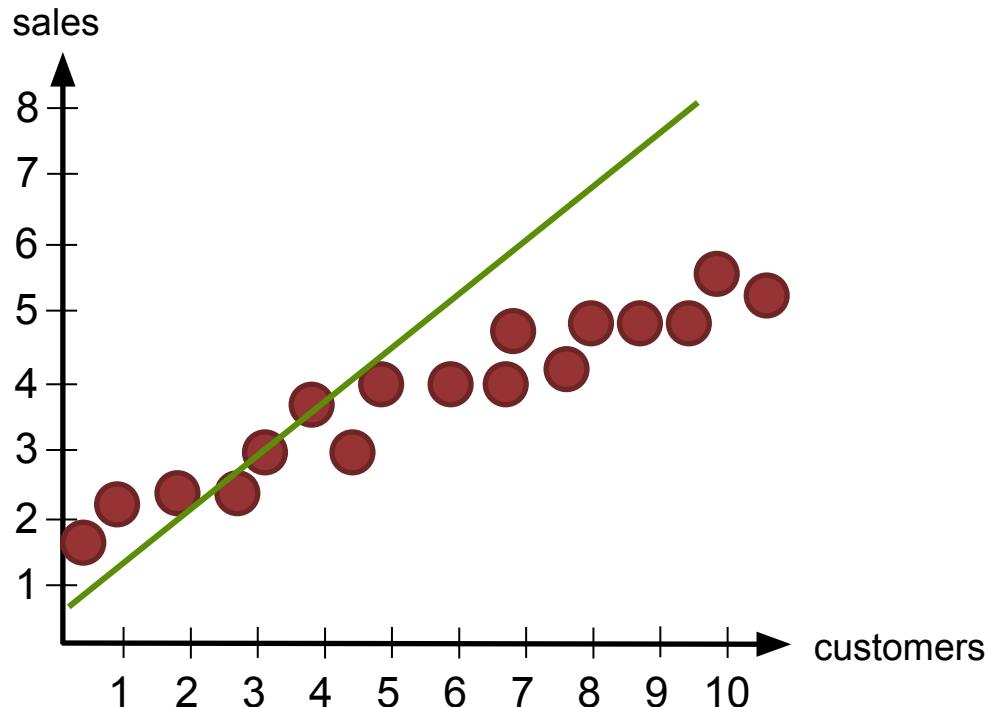

Find a line to fit
the point cloud

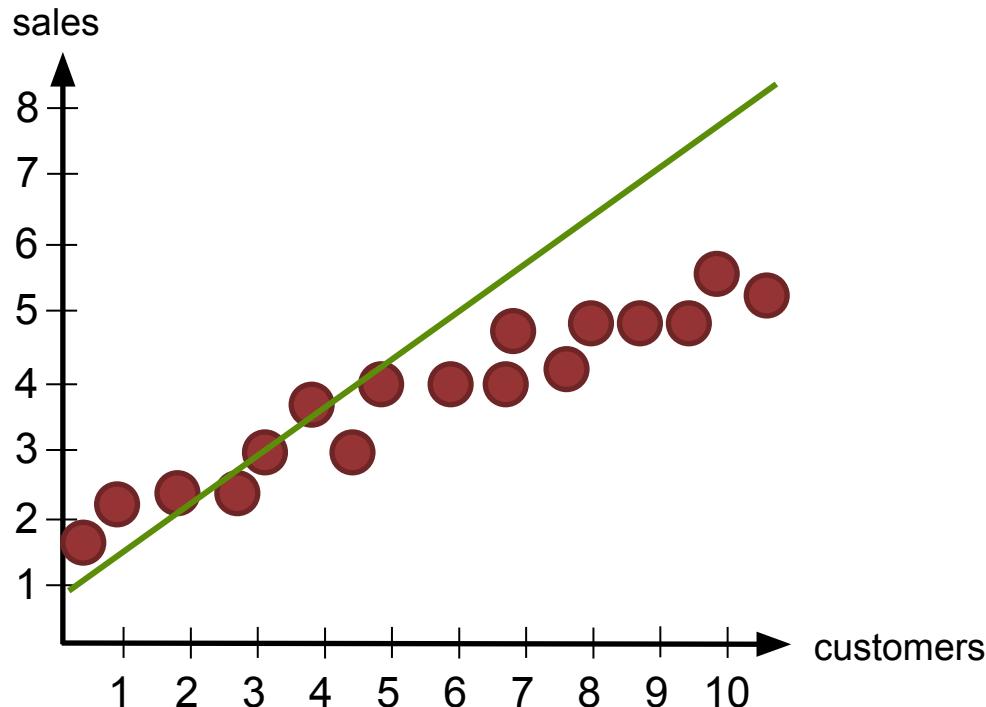

Linear Regression

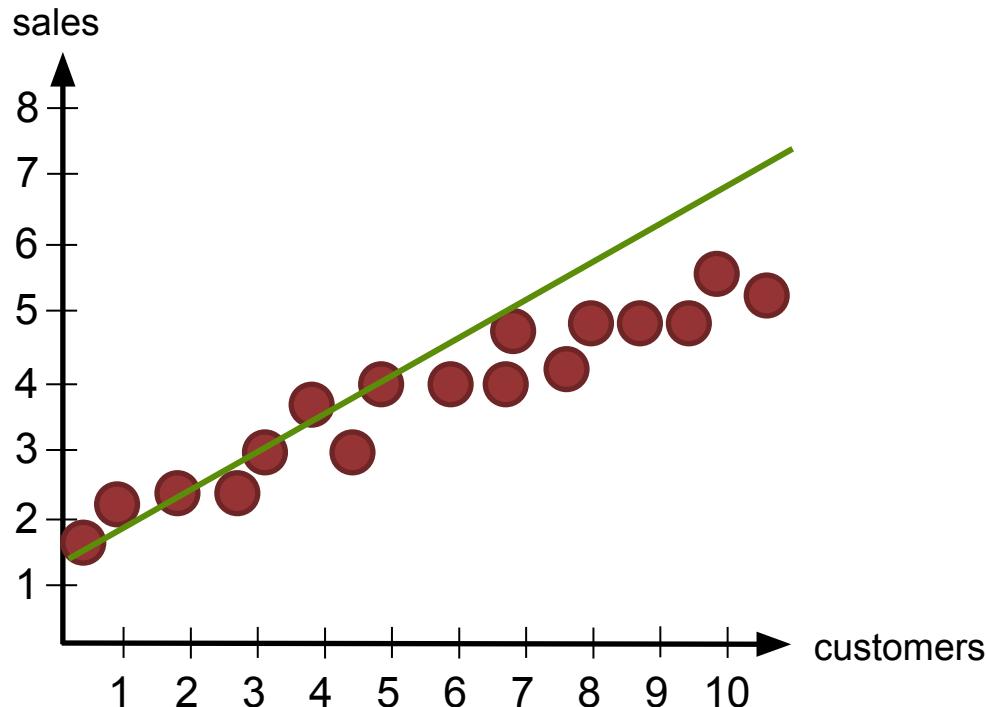

Linear Regression

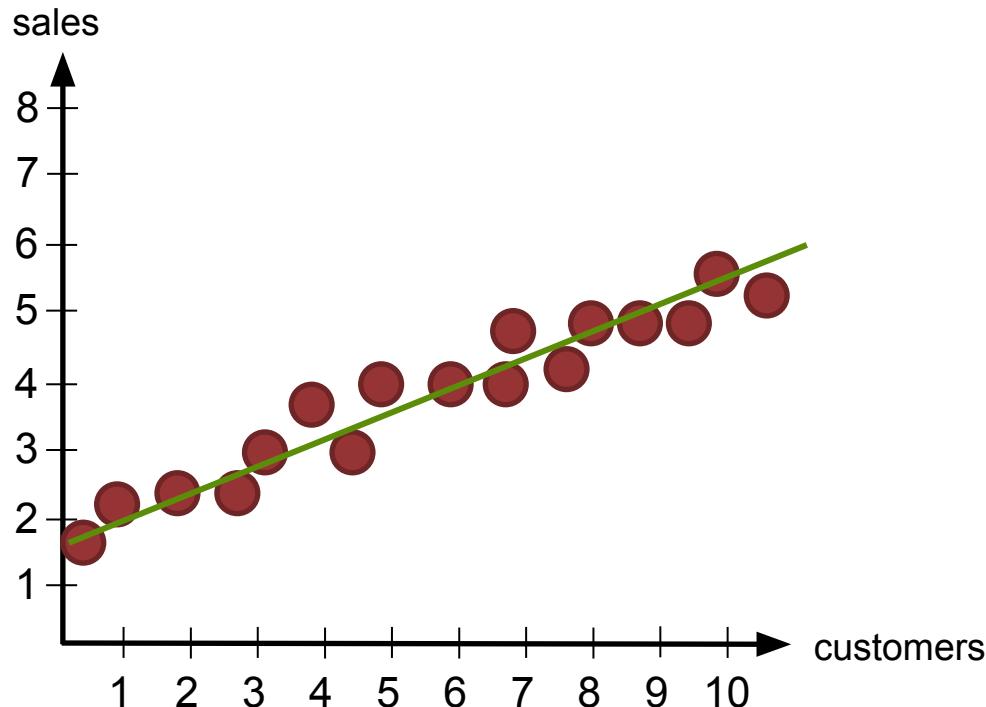

Linear Regression

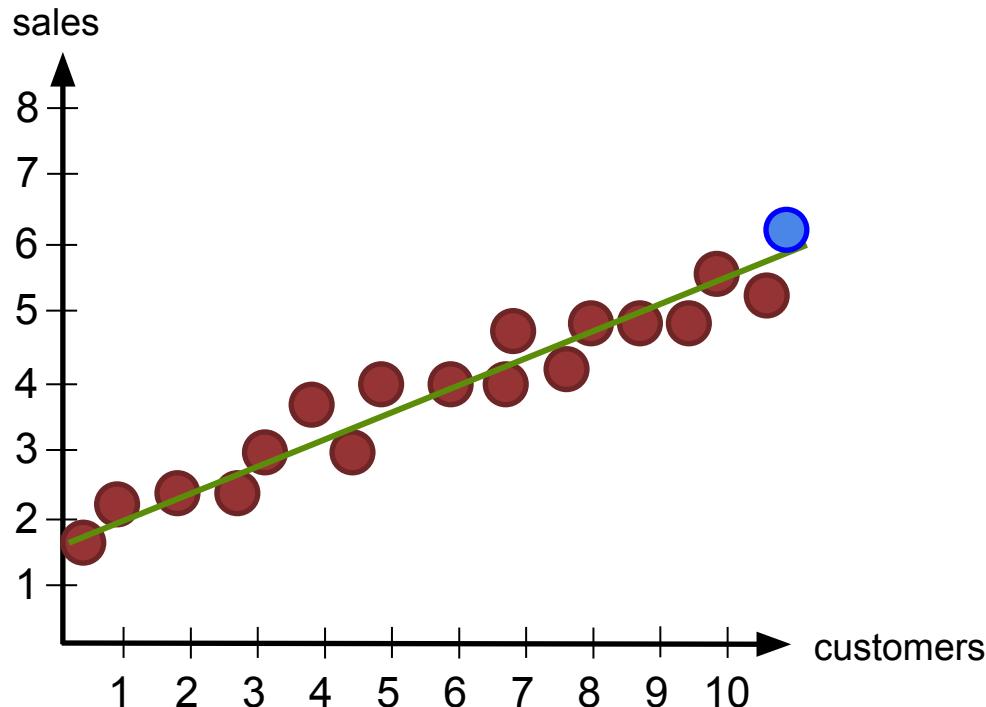

Linear Regression

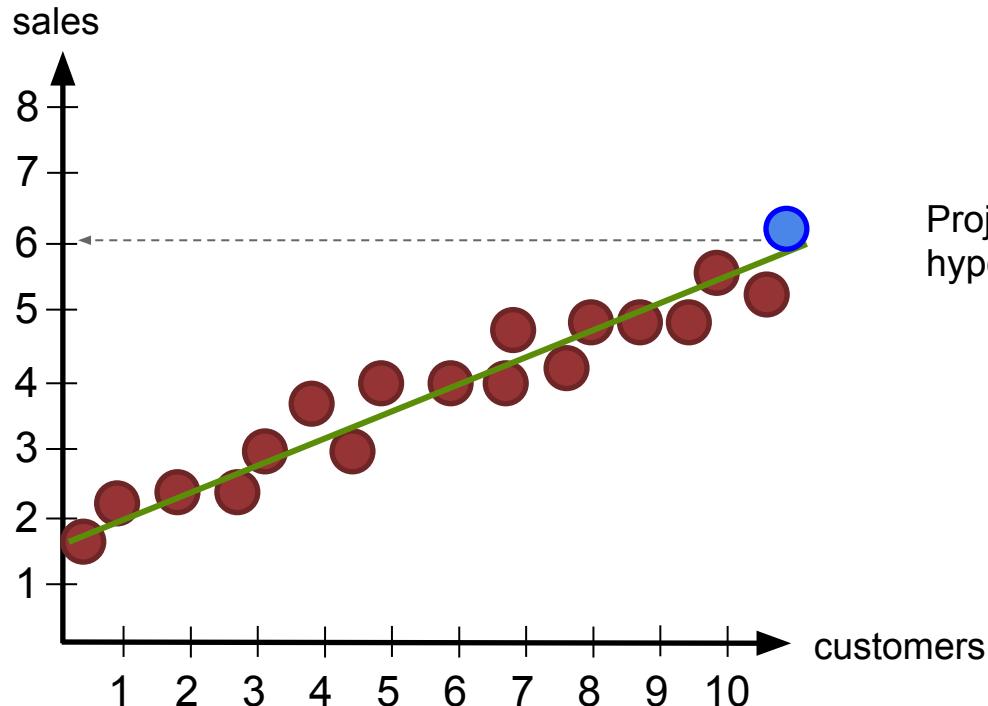

Linear Regression

Linear Regression

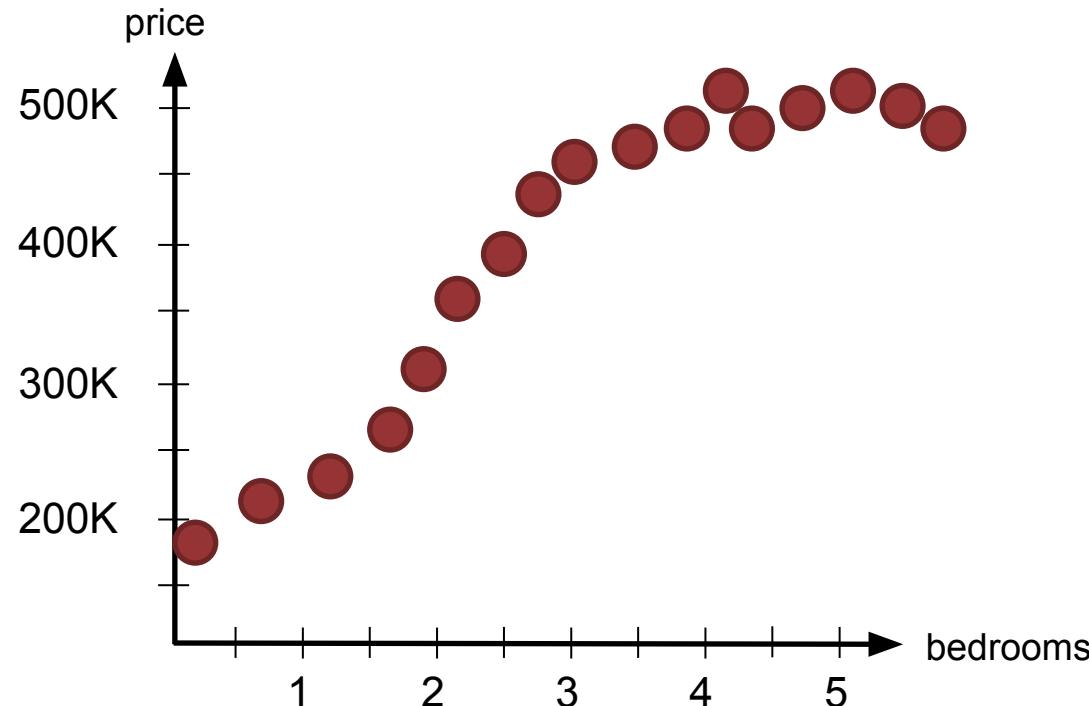

Linear Regression

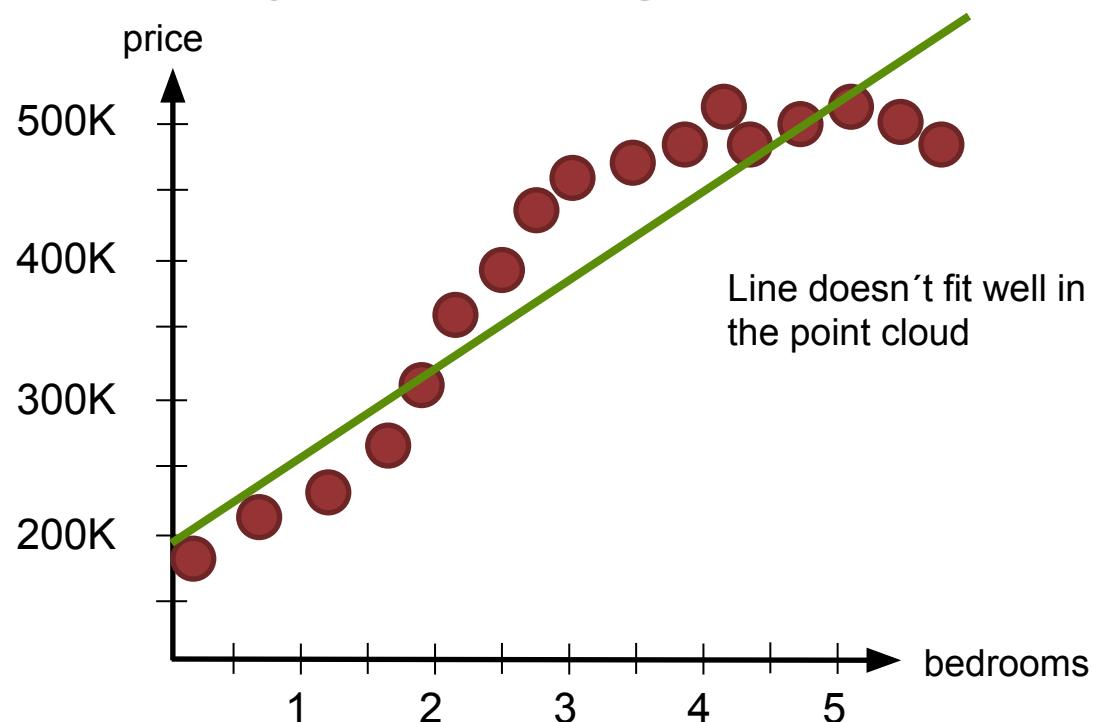

Project the value of
hypothetical point.

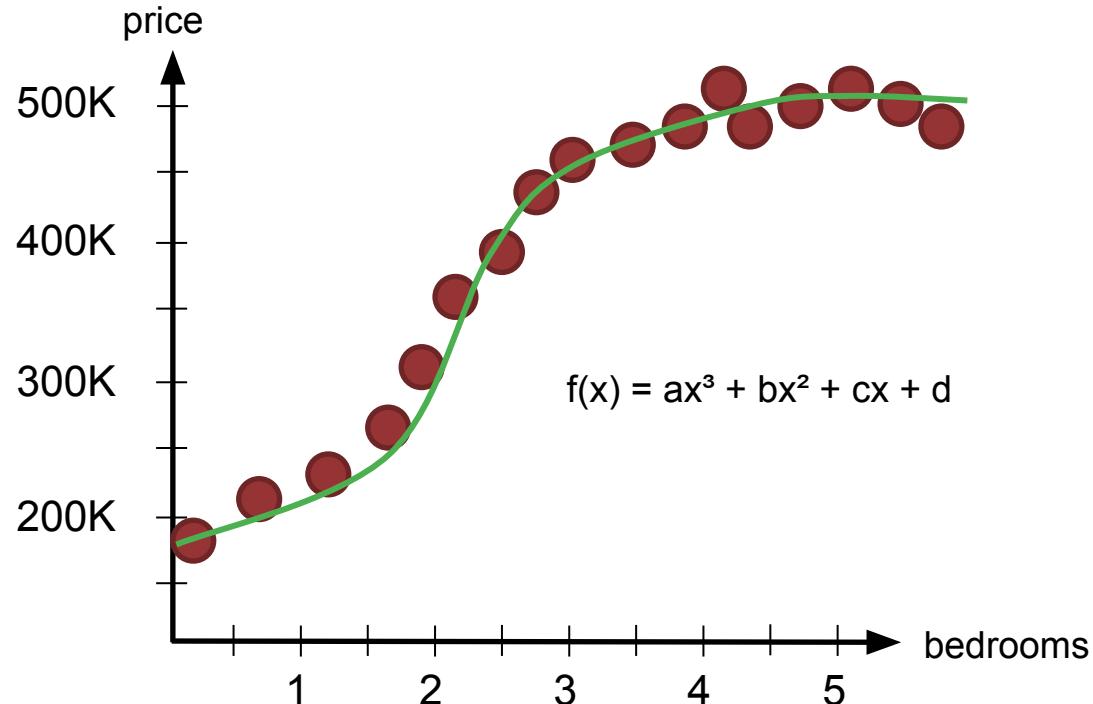

Polynomial Regression

Polynomial Regression

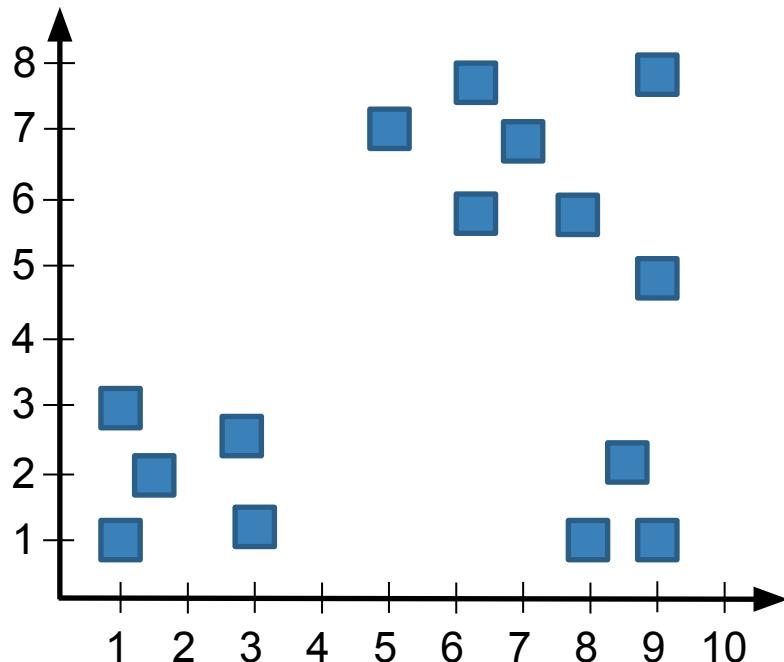

Polynomial Regression

K-means

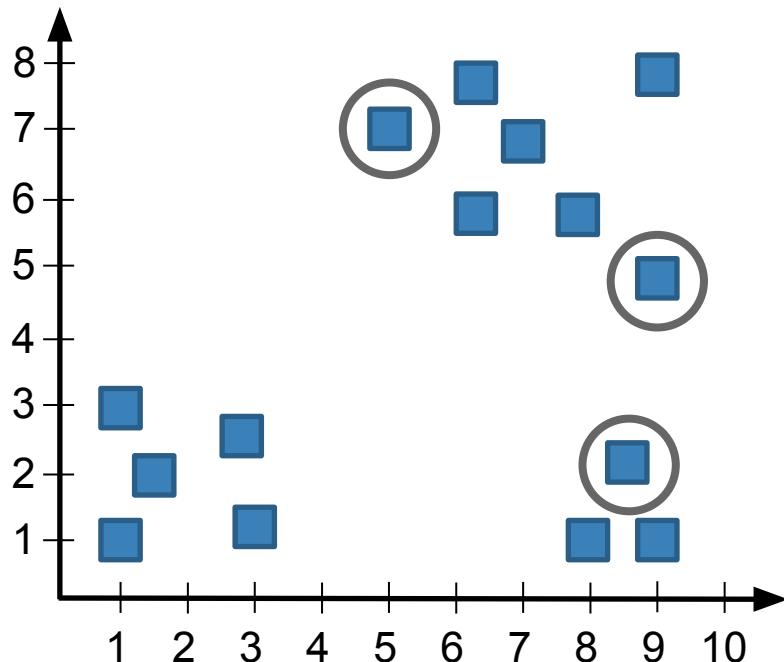

- ▶ Unsupervised learning;
- ▶ Clustering;
- ▶ Uses K to specify the number of clusters.

K-means

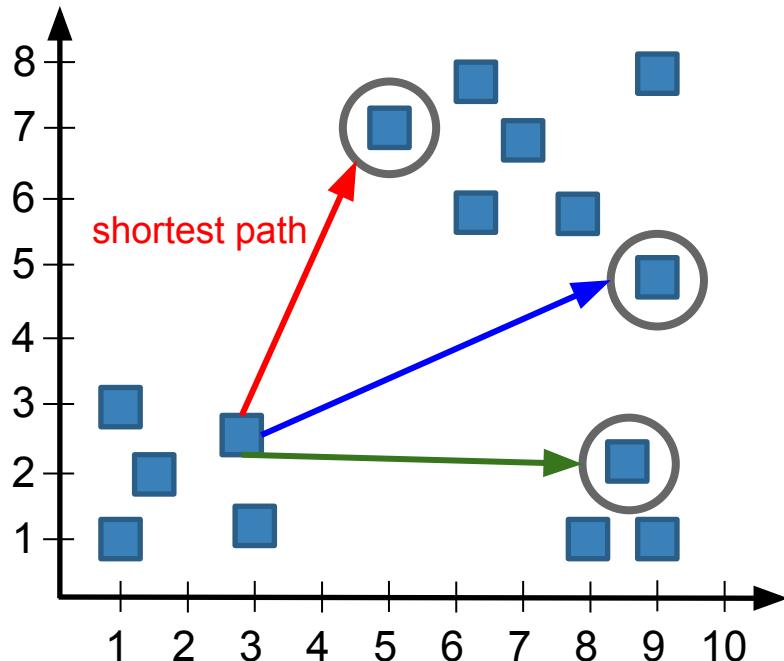

Find K clusters.
For K = 3

K-means

Step 1
Randomly choose
K initial samples
as cluster
centroids

K-means

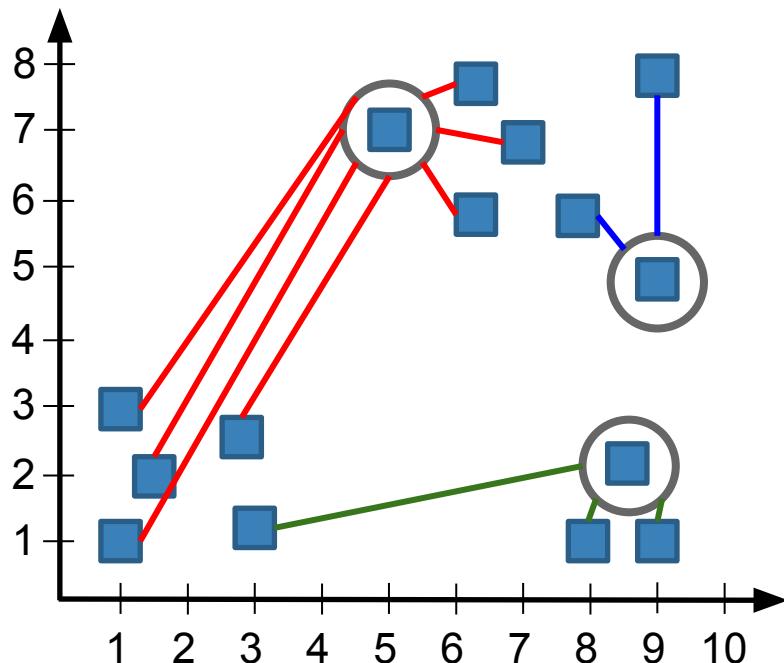

Step 2

For every sample,

- calculate distance to centroids
- pick cluster with closest centroid

K-means

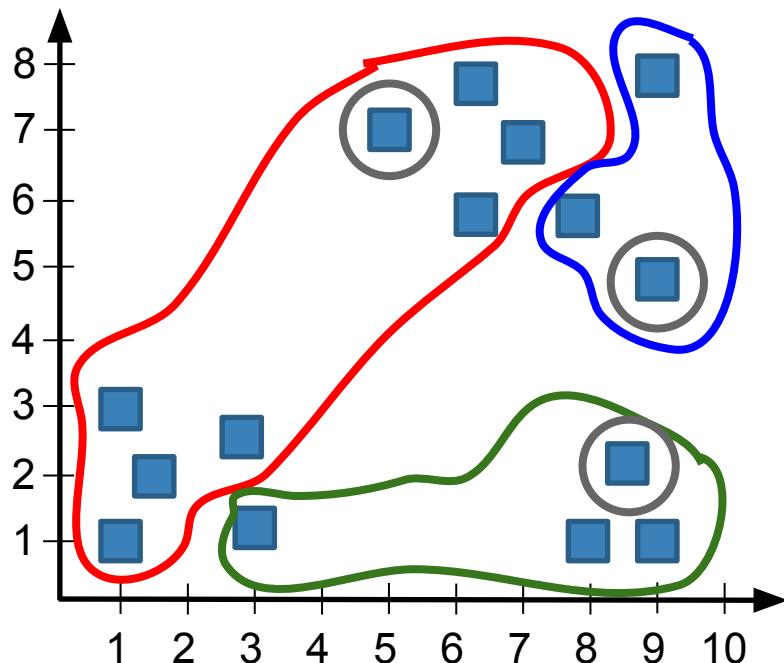

Step 2

For every sample,

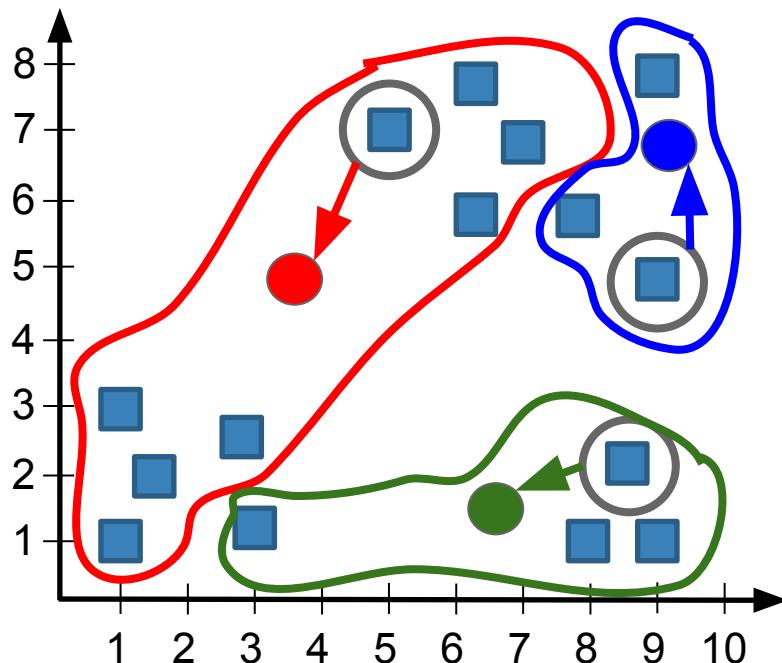

- calculate distance to centroids
- pick cluster with closest centroid

K-means

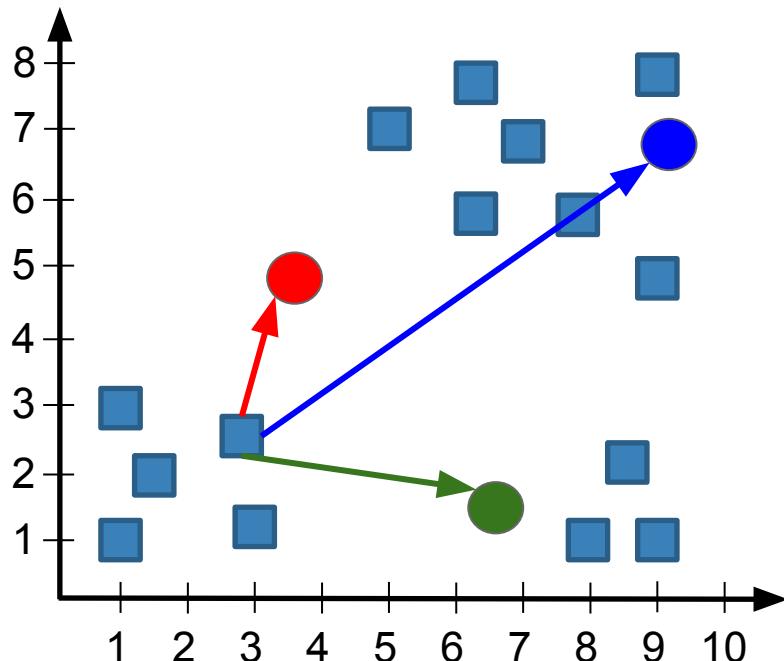

Resulting
clusters

K-means

Step 3
Recalculate
centroids from
cluster members

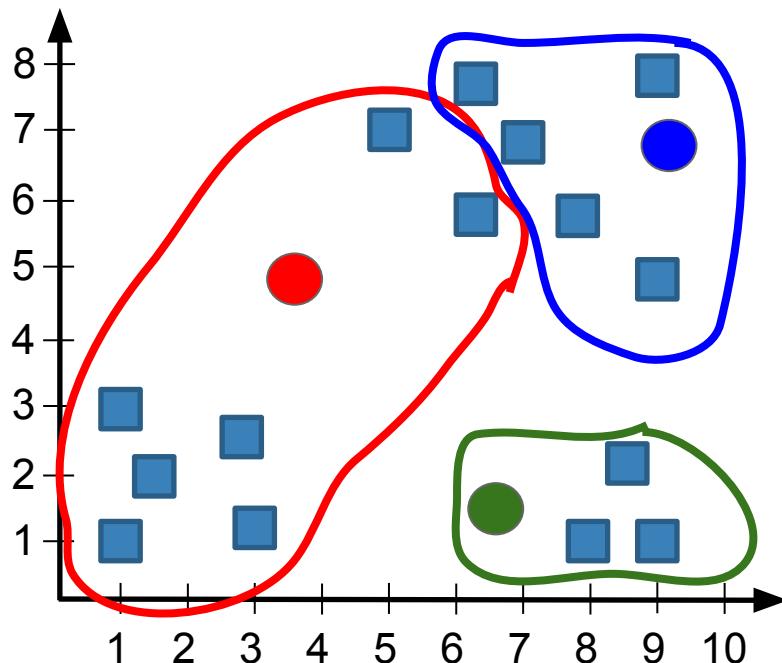

K-means

Step 4

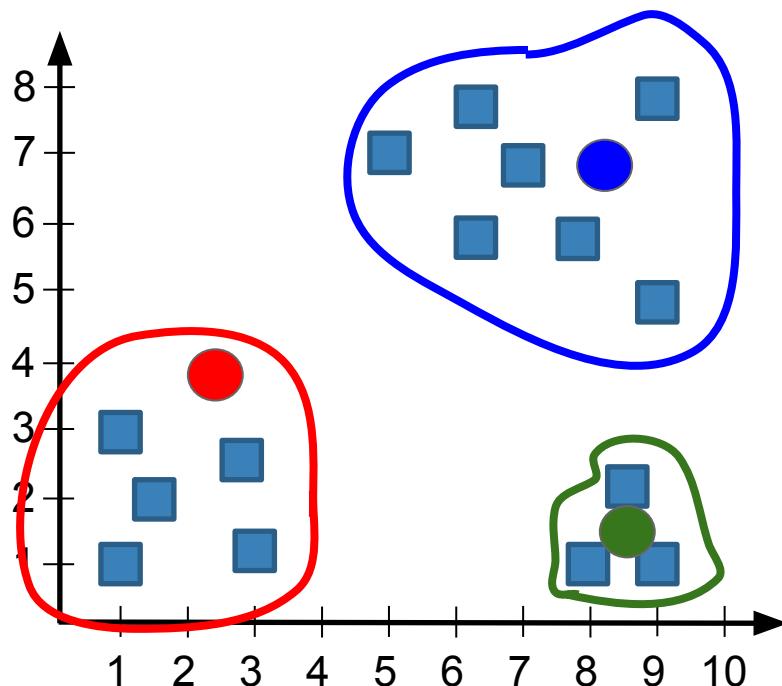

If centroids move
is bigger than
distance D, go
back to step 2 if
new centroids

K-means

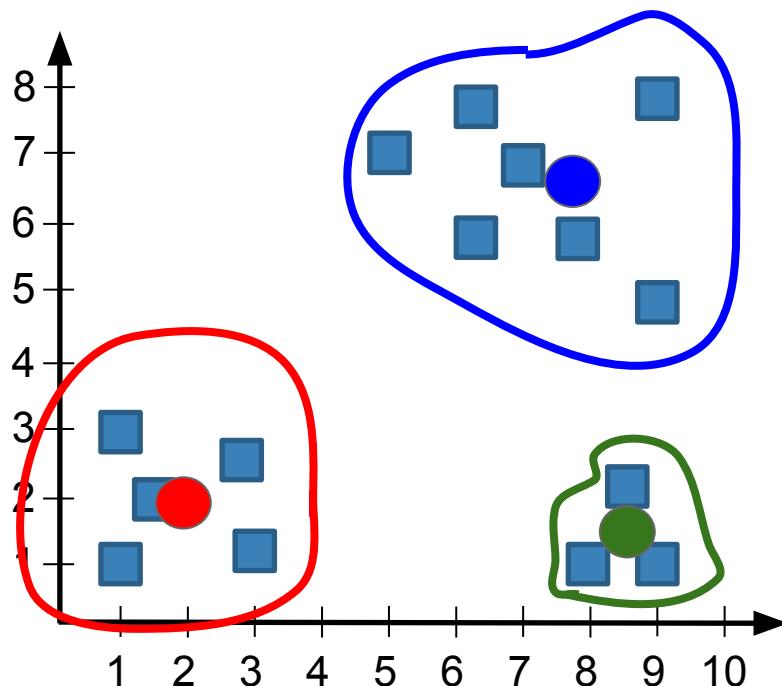

2nd iteration

K-means

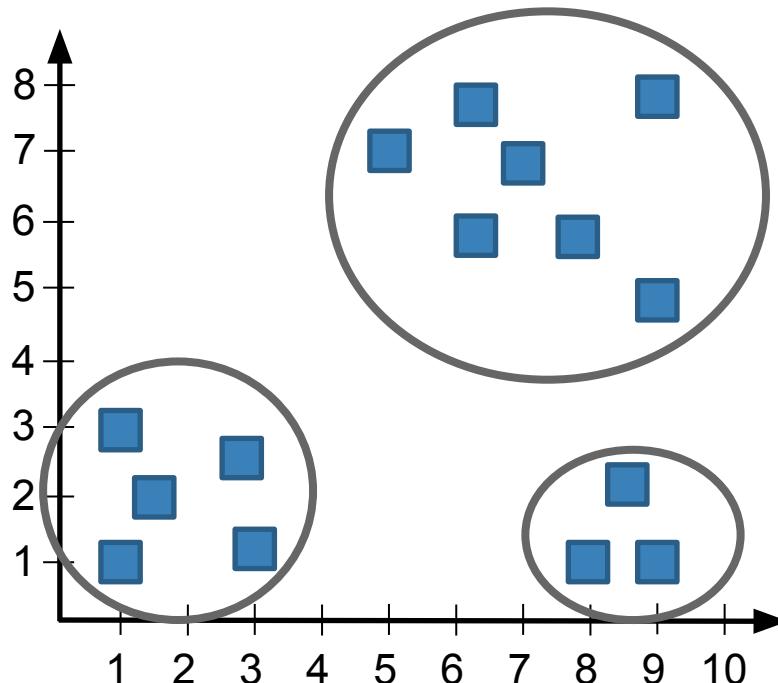

3rd iteration

K-means

4th iteration

K-means

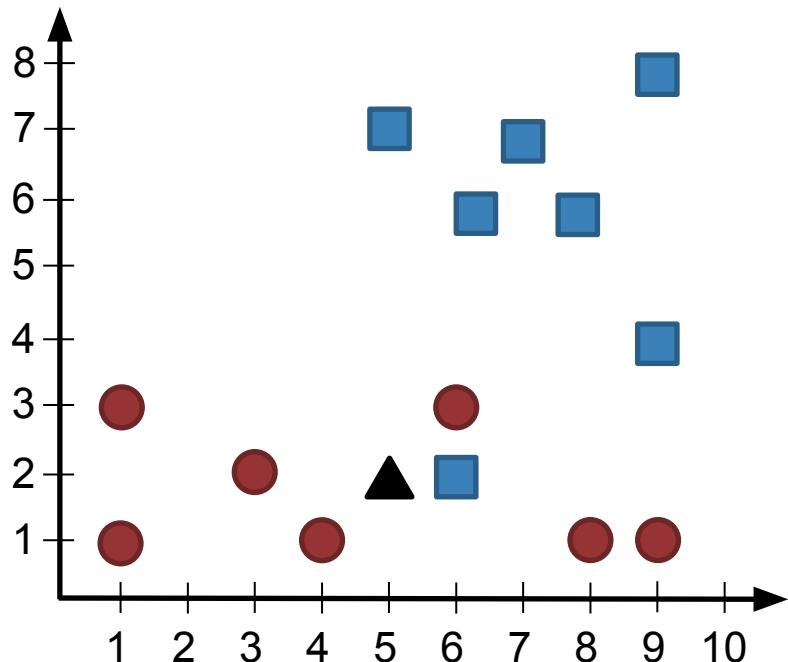

Find K clusters.
For K = 3

K-Nearest Neighbors (K-NN)

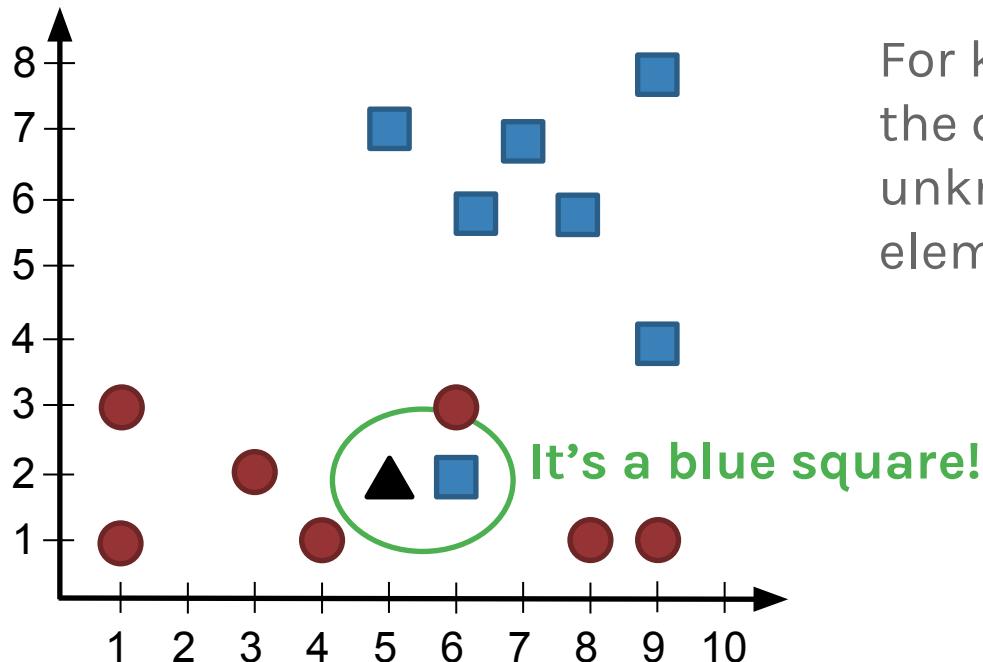

- ▶ Supervised learning;
- ▶ Classification and regression;
- ▶ **Lazy learning**;
- ▶ Uses the k closest instances to classify the unknown one;
- ▶ Easy to implement.

K-NN Example

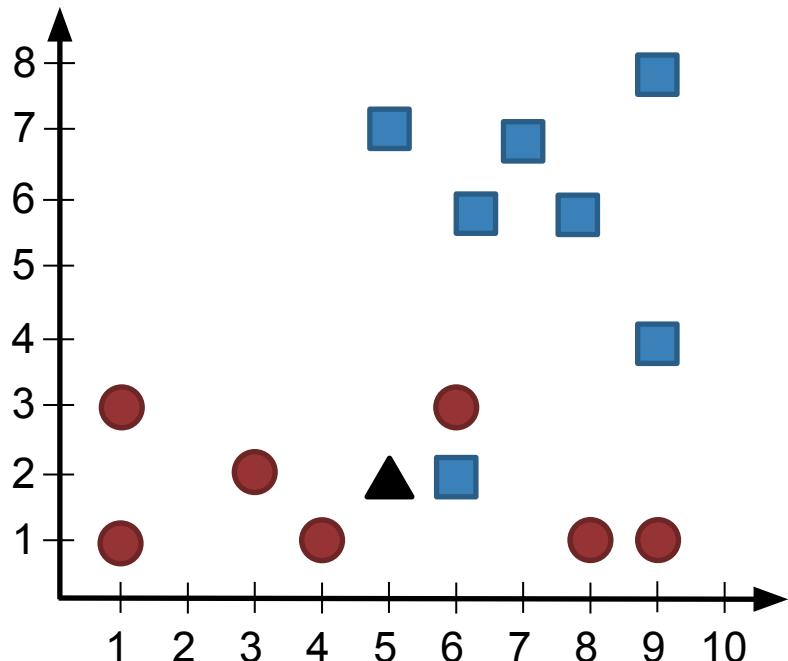

For $k=1$, what is the class of the unknown element (▲)?

K-NN Example

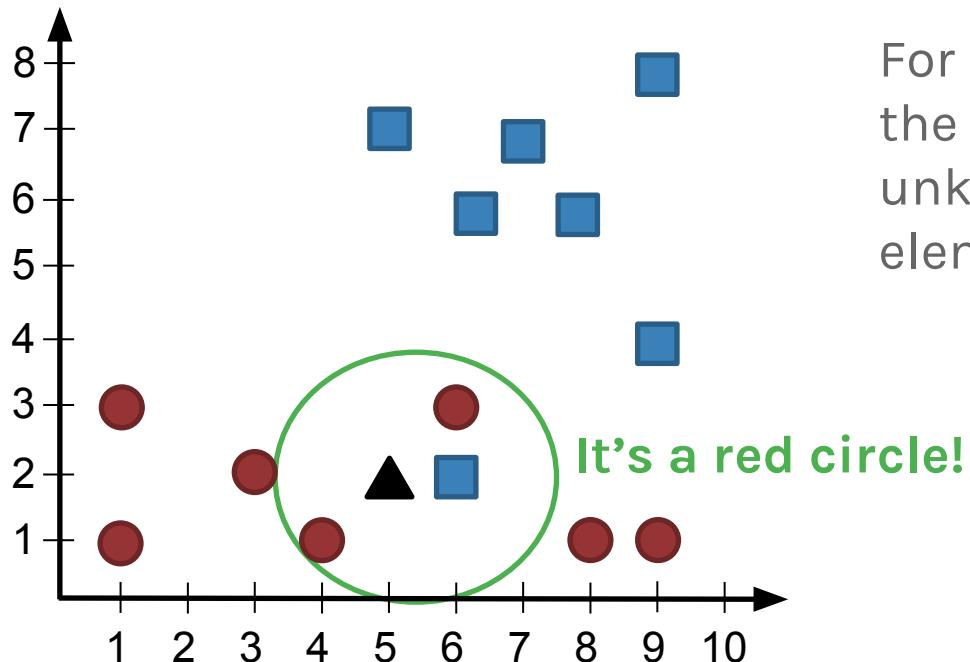

For $k=1$, what is the class of the unknown element (\blacktriangle)?

K-NN Example

For $k=3$, what is the class of the unknown element (▲)?

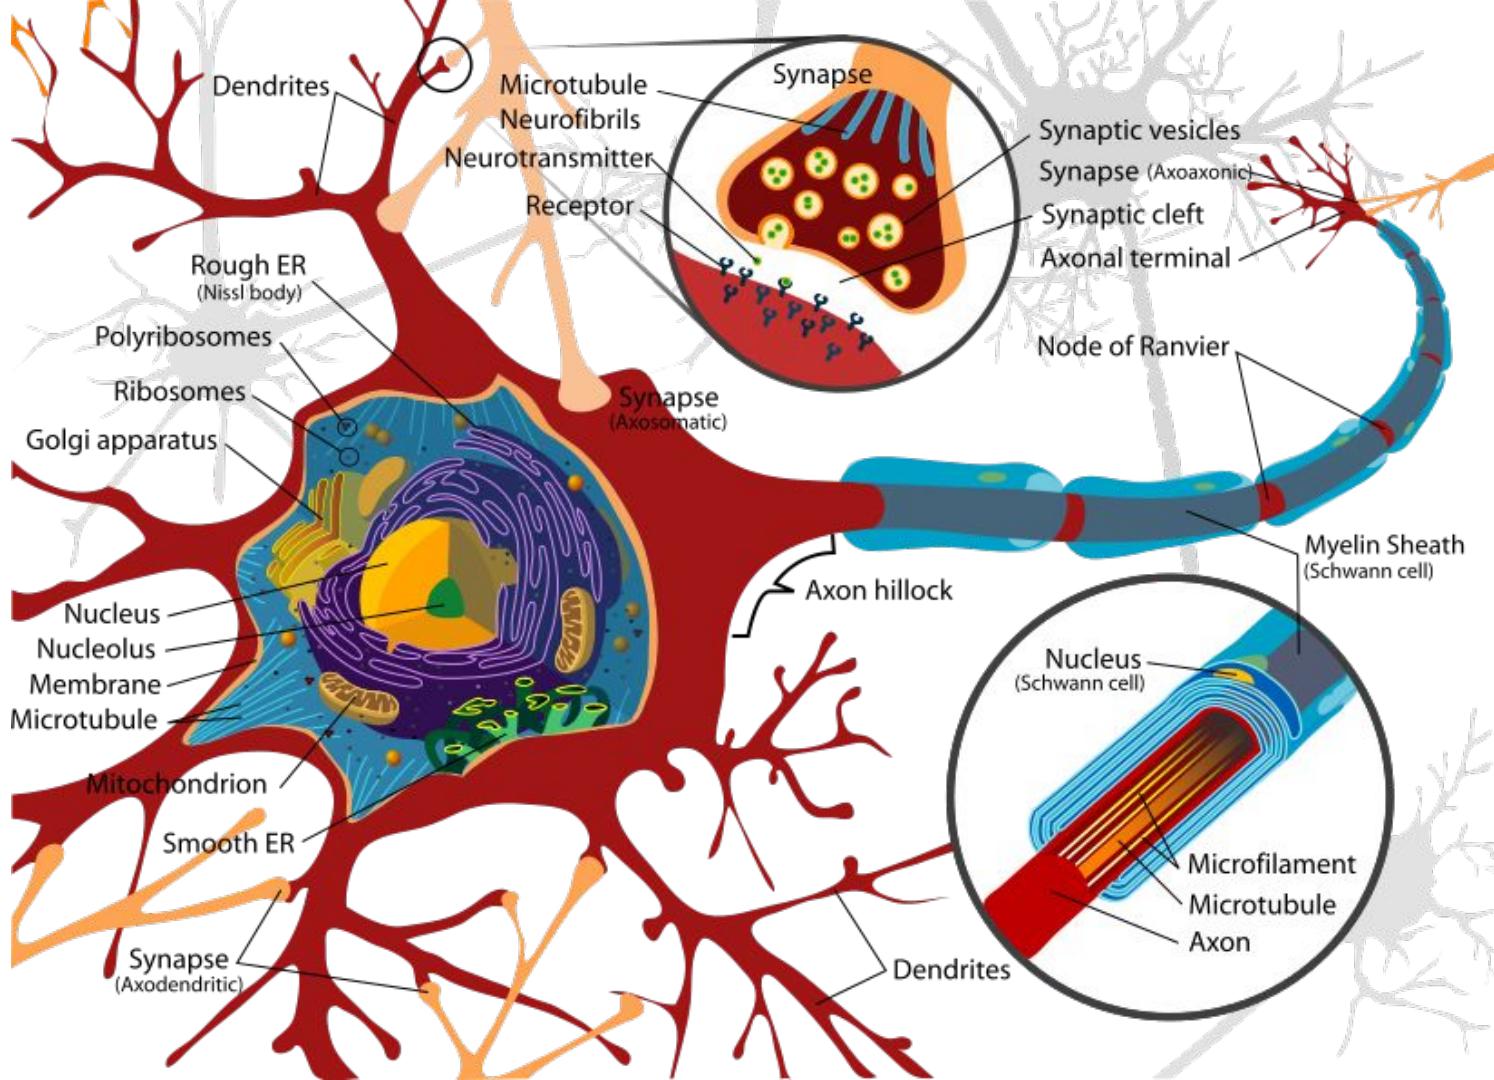

K-NN Example

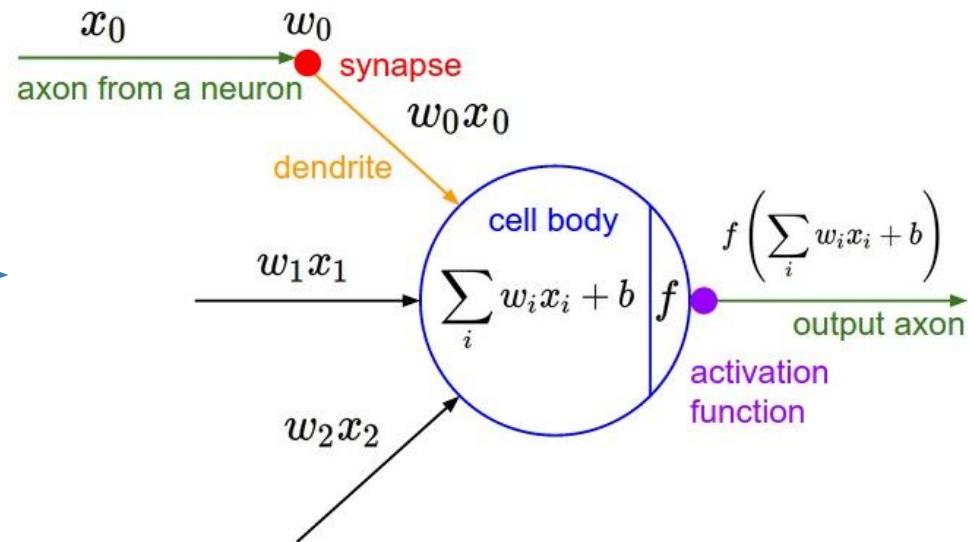

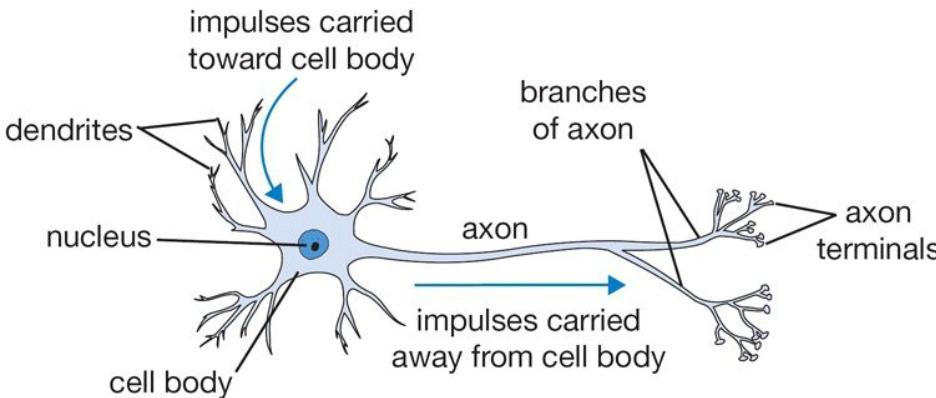

For $k=3$, what is the class of the unknown element (\blacktriangle)?

It's a red circle!

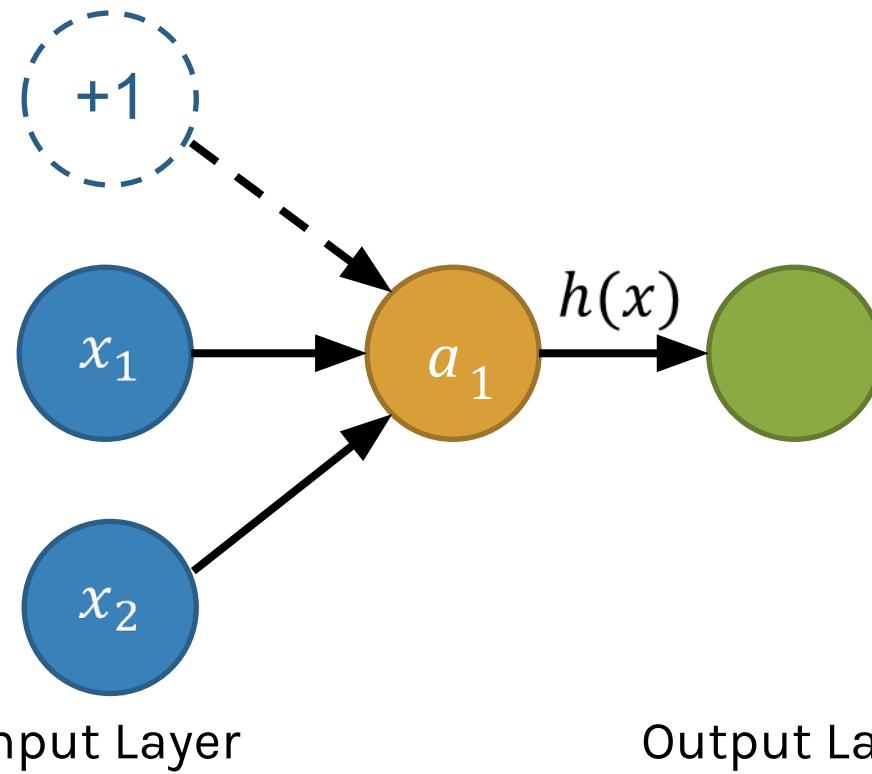

Neural Network

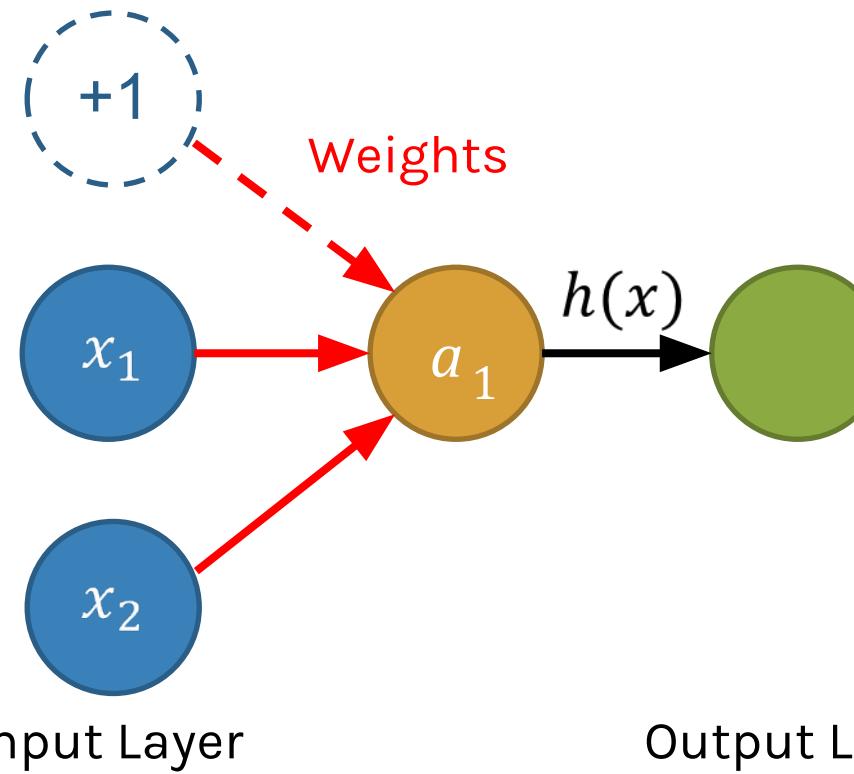

Neural Network

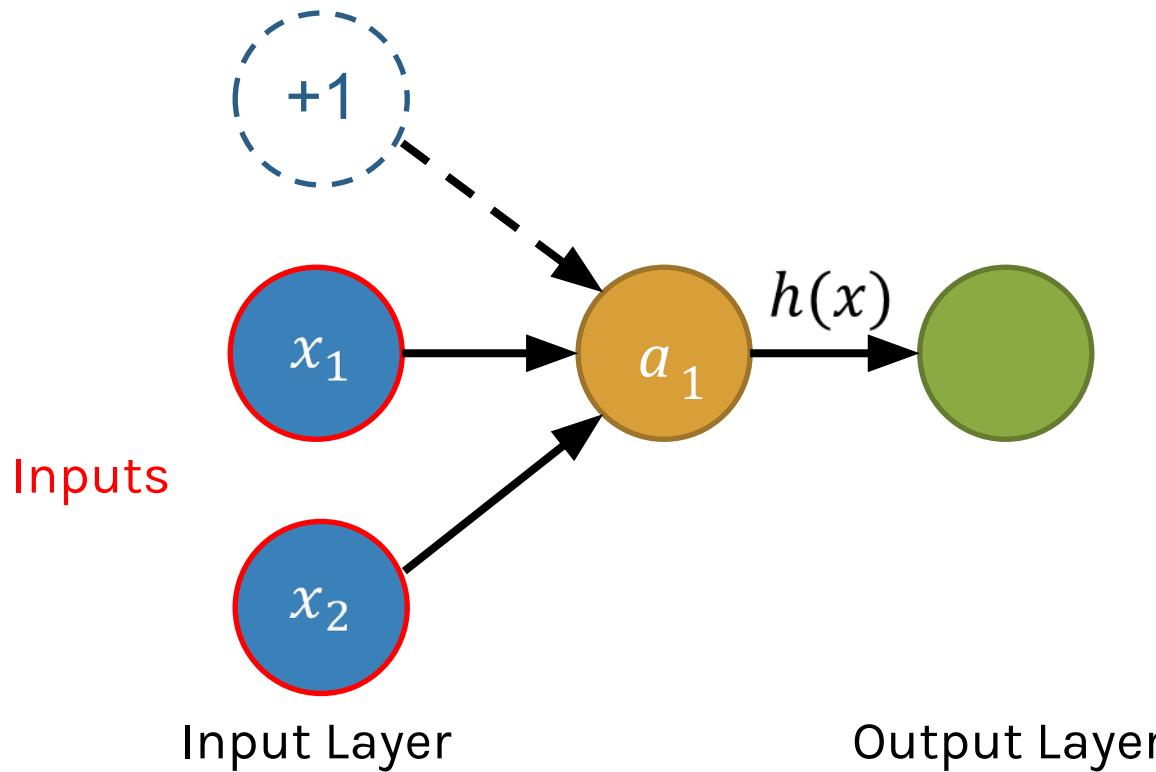

Neuron model

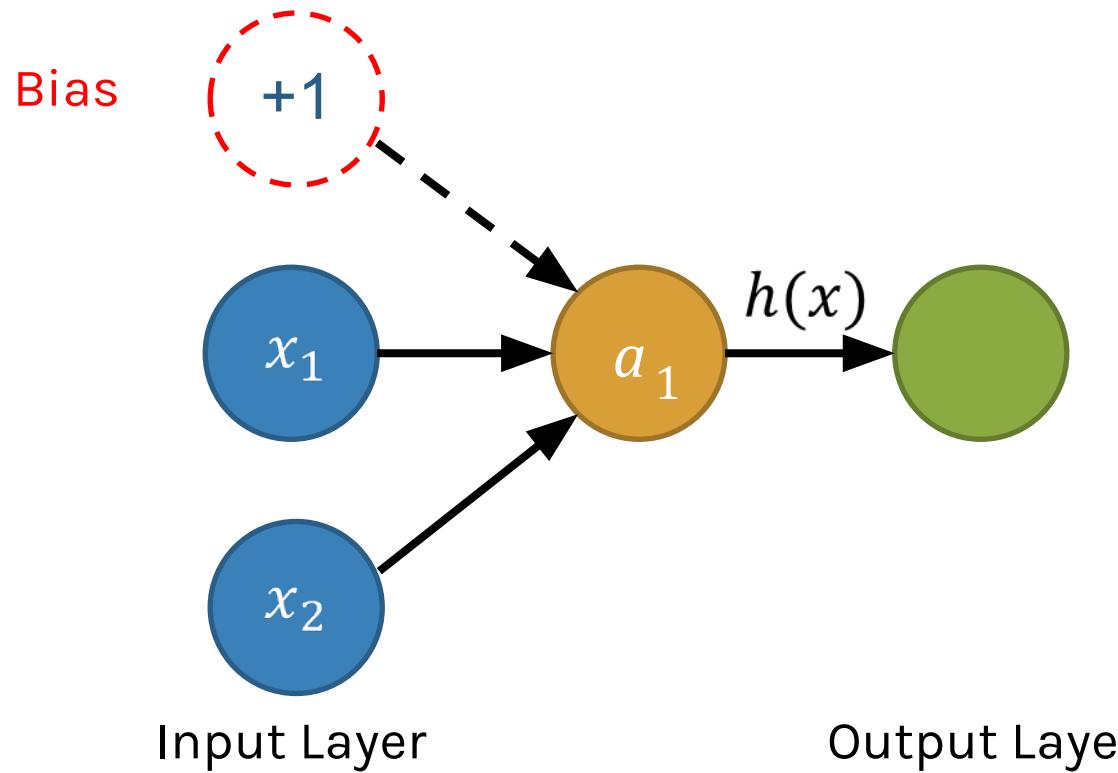

Neuron model

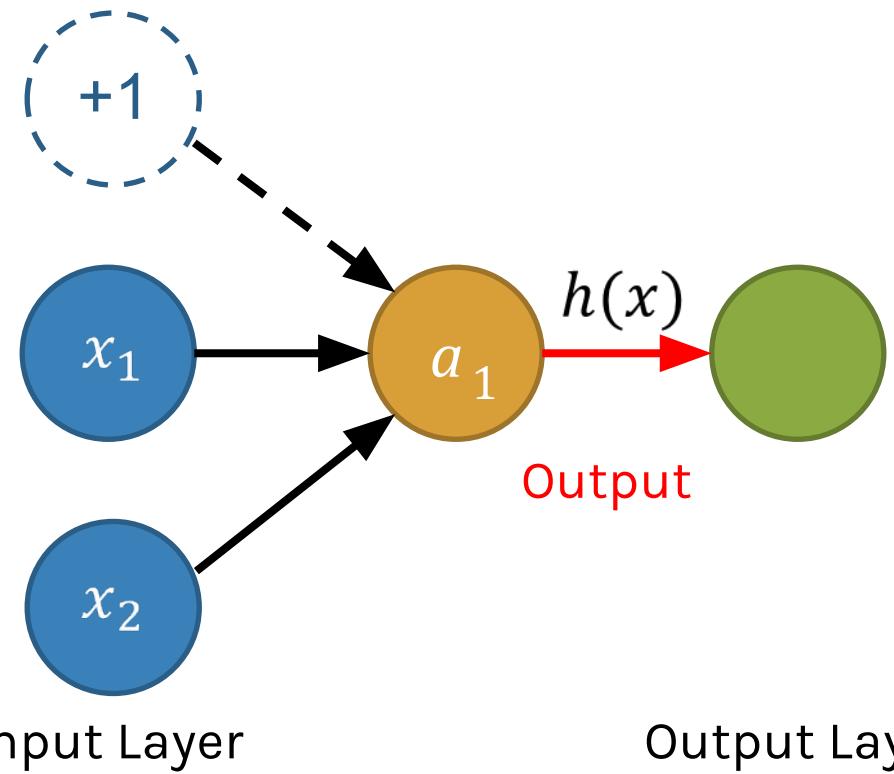

Neuron model

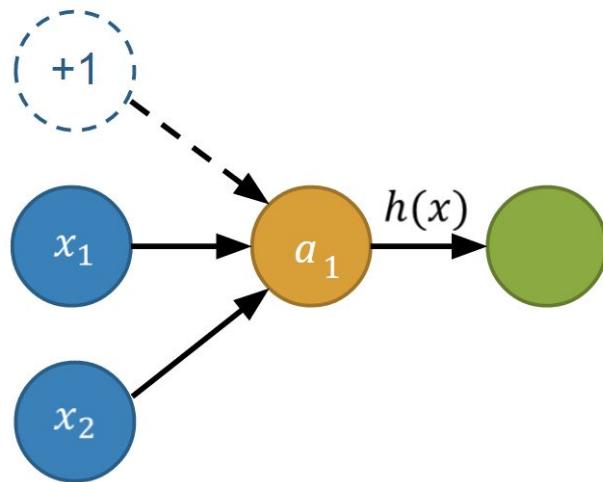

Neuron model

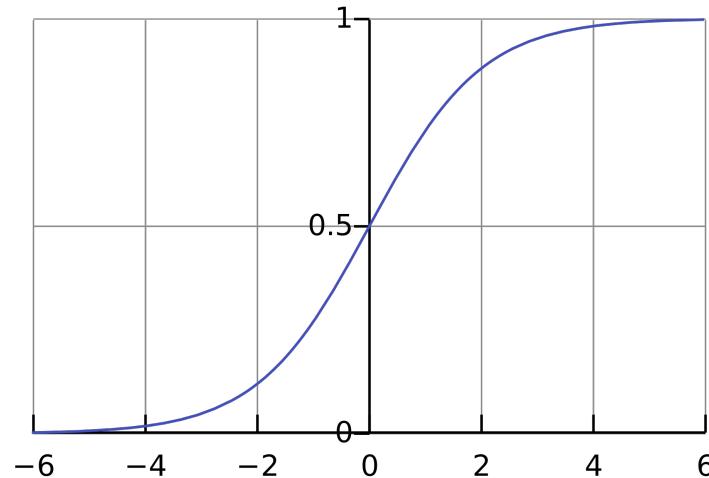

Neuron model

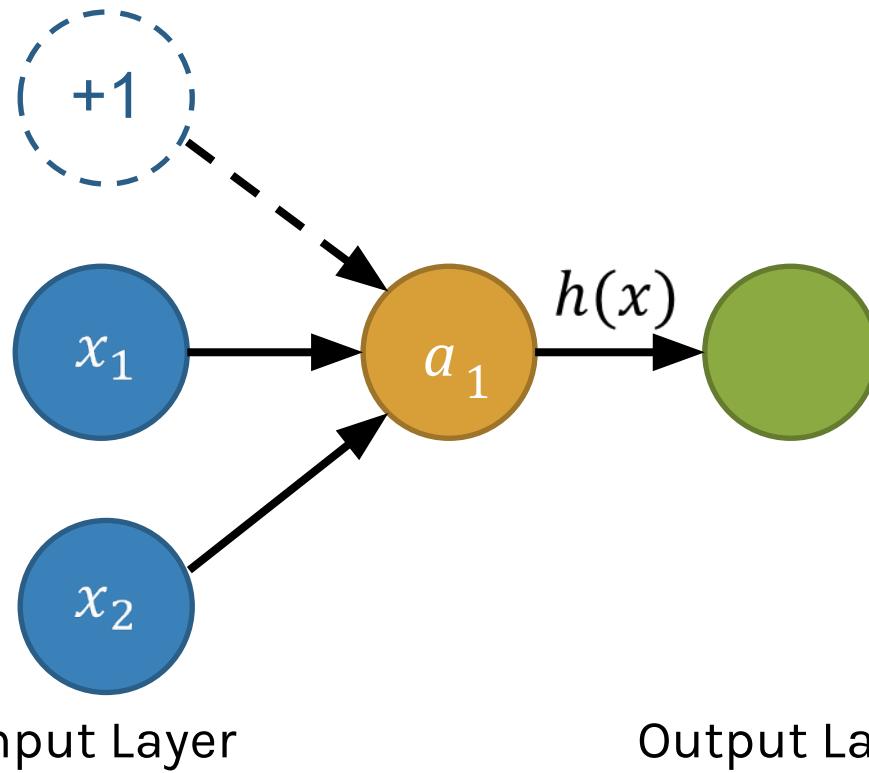

Sigmoid

$$h(x) = \frac{1}{1 + e^{-x}}$$

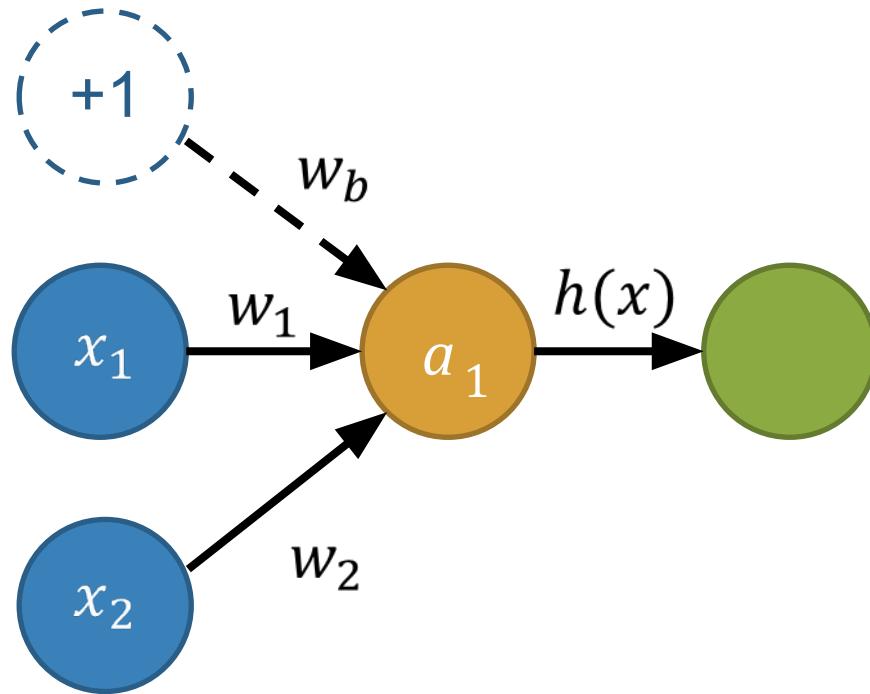

Neural Network Example

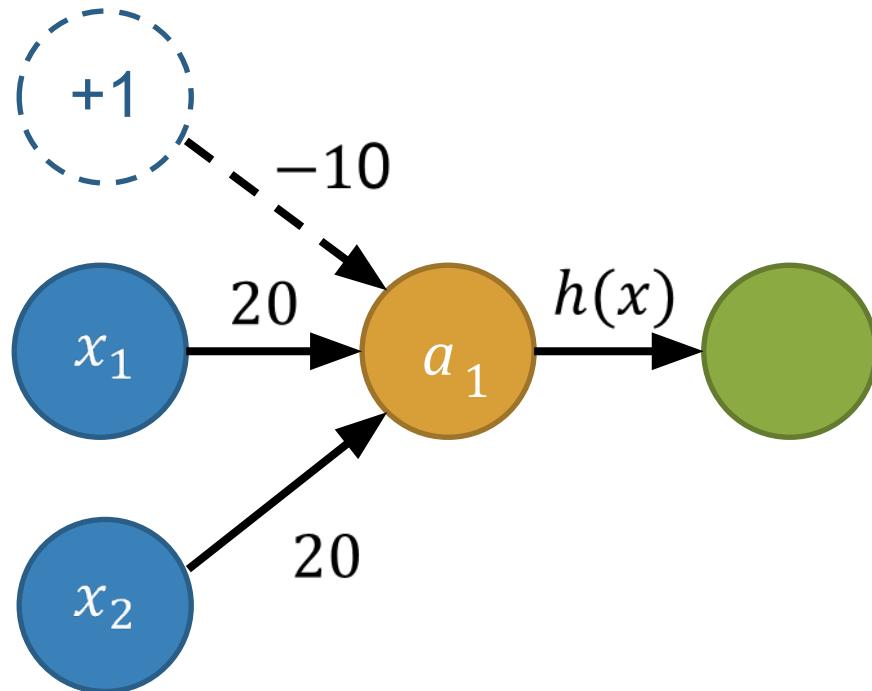

Create a neural network that behaves as an Logic OR.

Neural Network Example

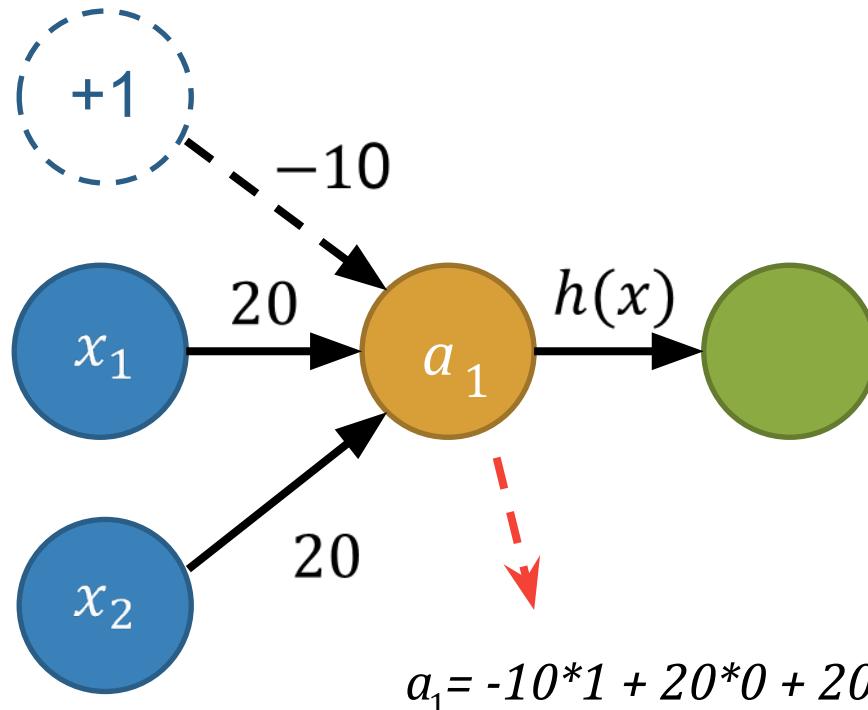

Input	Output
0	0
0	1
1	0
1	1

Neural Network Example

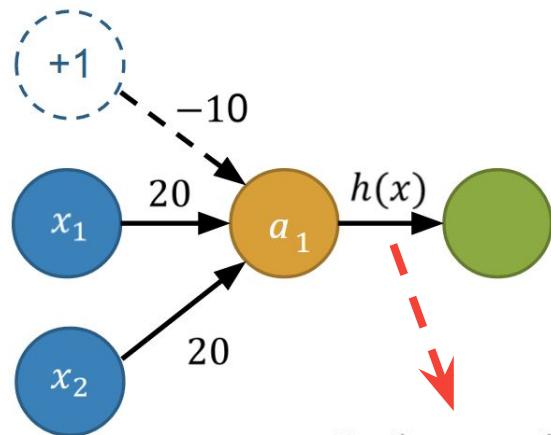

Input	Output
0	0
0	1
1	0
1	1

Neural Network Example

Input	Output
0	0
0	1
1	0
1	1

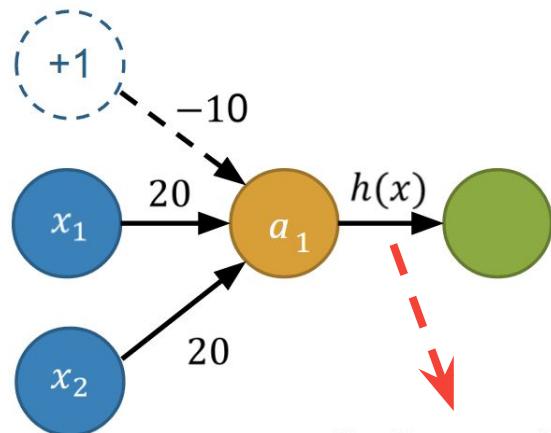

Neural Network Example

$$h(-10) = \frac{1}{1 + e^{-(-10)}} = 0.000045$$

Input	Output
0	0
0	1
1	0
1	1

Neural Network Example

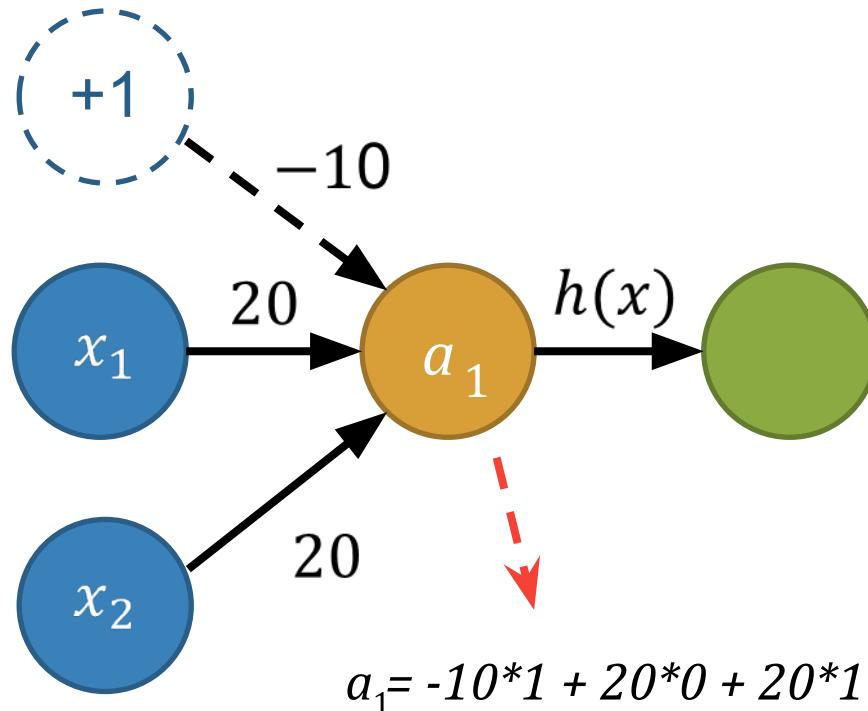

$$h(-10) = \frac{1}{1 + e^{-(-10)}} = 0.000045$$

Input	Output
0	0
0	1
1	0
1	1

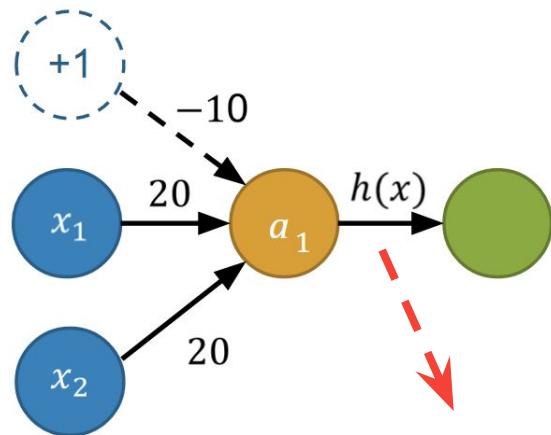

$$0.000045 < 0.5 = 0$$

Neural Network Example 2

Input	Output
0	0
0	1
1	0
1	1

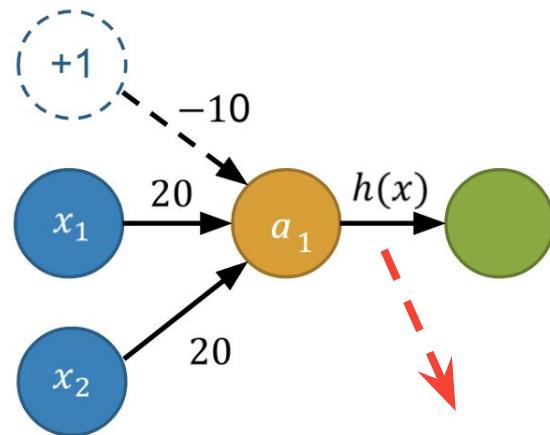

Neural Network Example 2

$$h(10) = \frac{1}{1 + e^{-(10)}} = 0.999955$$

Input	Output
0	0
0	1
1	0
1	1

Neural Network Example 2

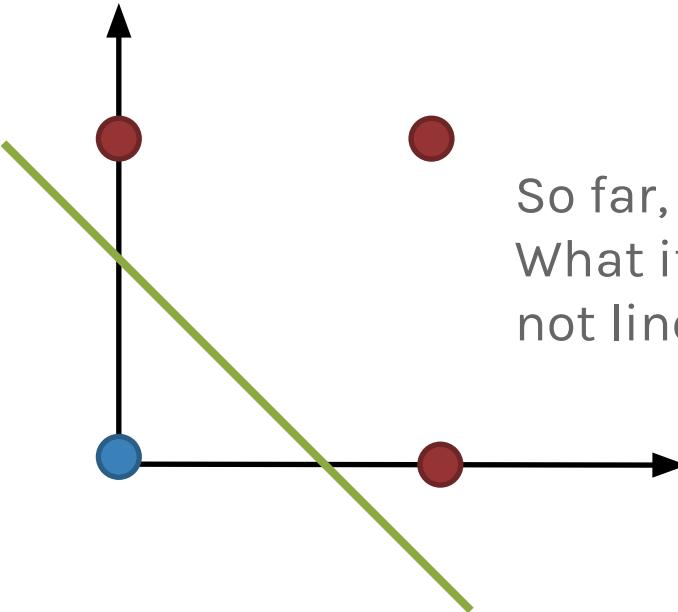

Input	Output
0	0
0	1
1	0
1	1

$$h(10) = \frac{1}{1 + e^{-(10)}} = 0.999955$$

$$0.99995 \geq 0.5 = 1$$

Neural Network Example (OR)

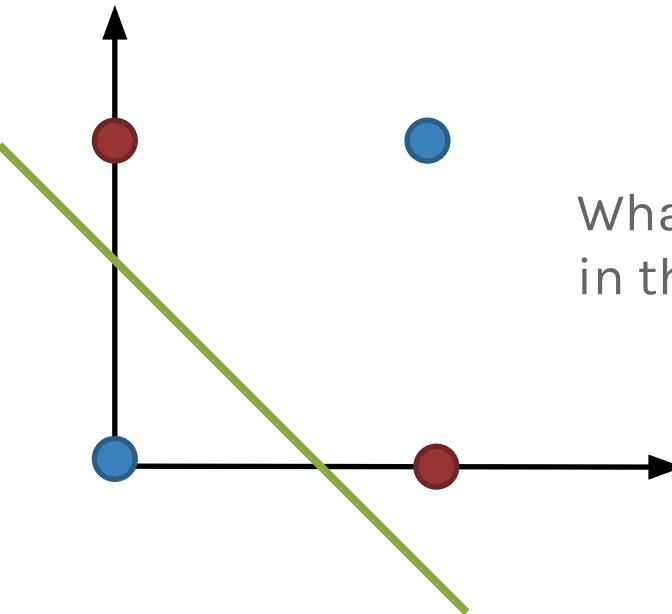

Input	Output
0	0
0	1
1	0
1	1

So far, linearly separable.
What if the problem is
not linearly separable?

Neural Network Example 3 (XOR)

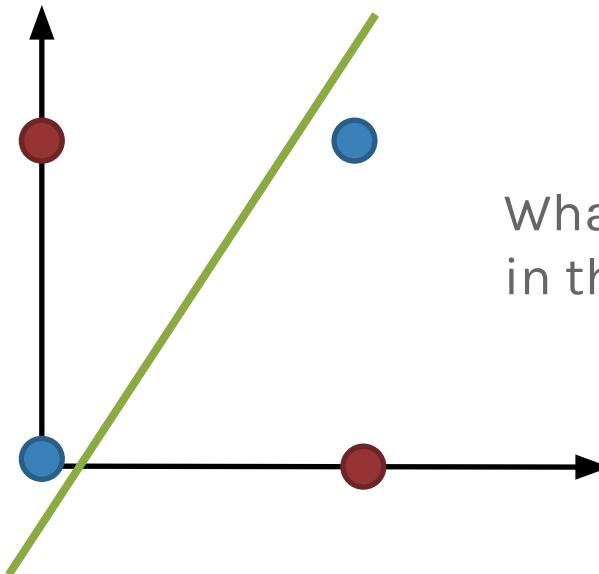

Input	Output
0	0
0	1
1	0
1	1

What could we do
in this case?

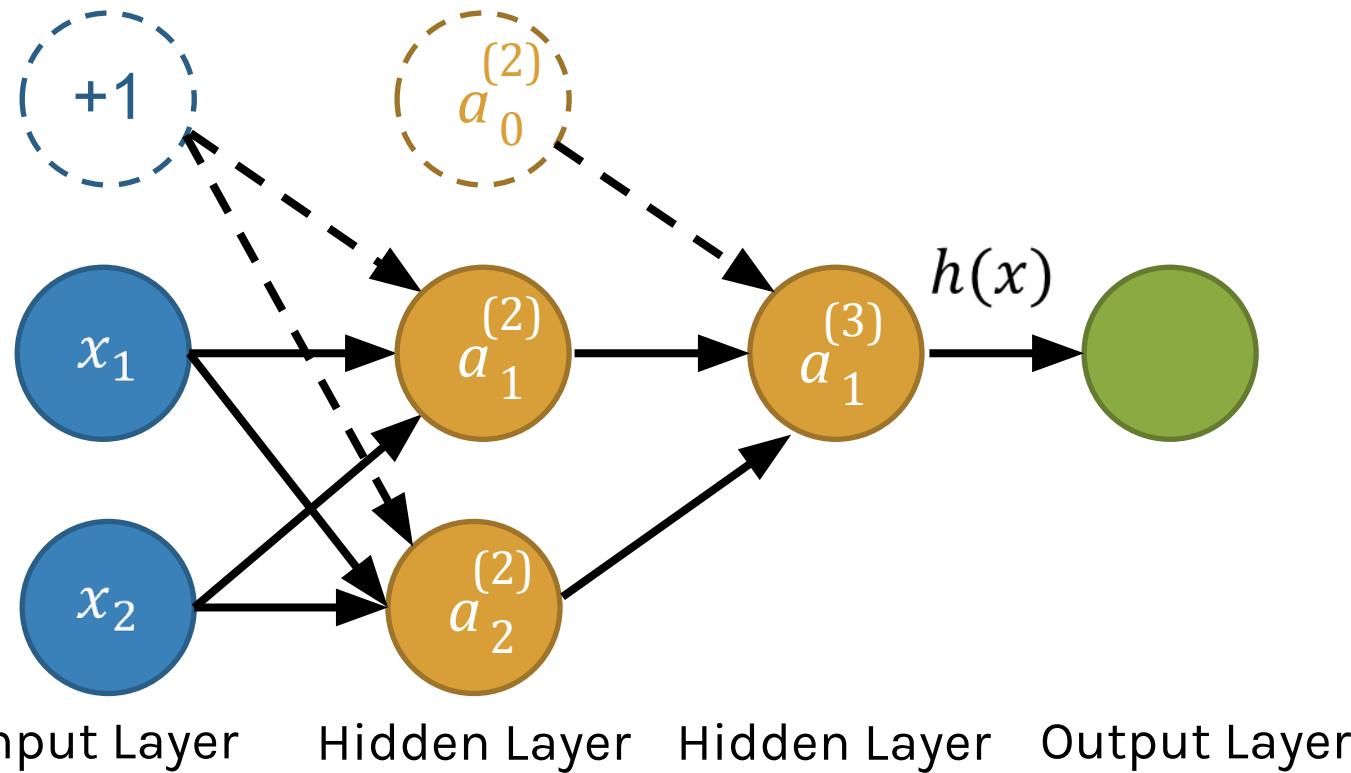

Neural Network Example 3 (XOR)

Input	Output
0	0
0	1
1	0
1	1

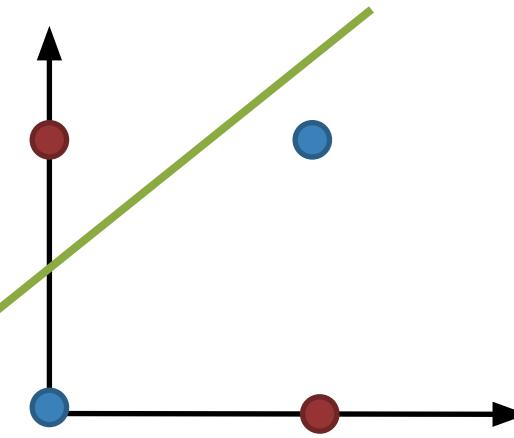

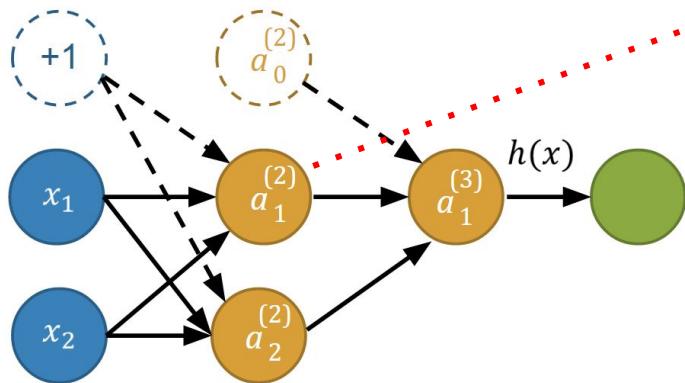

What could we do
in this case?

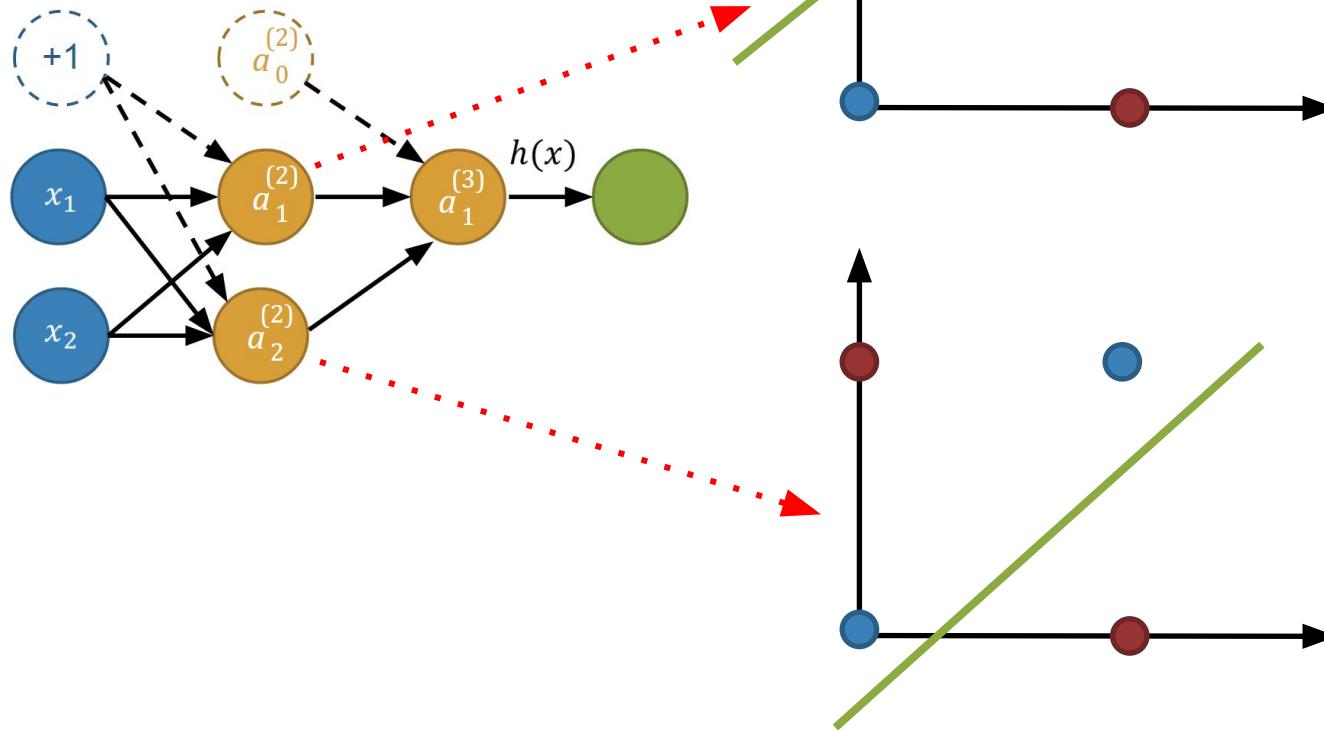

Multi-Layer Perceptron

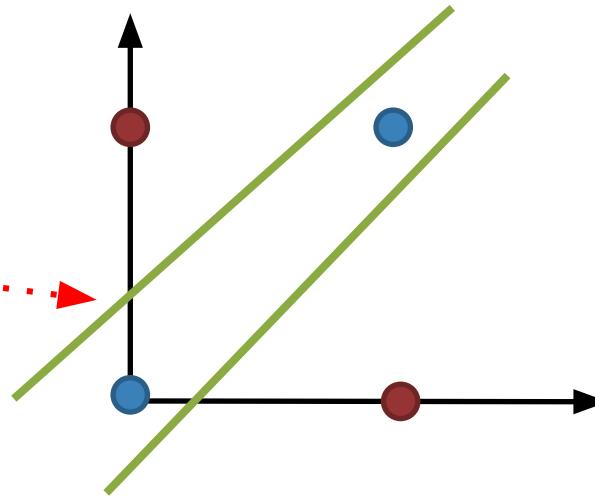

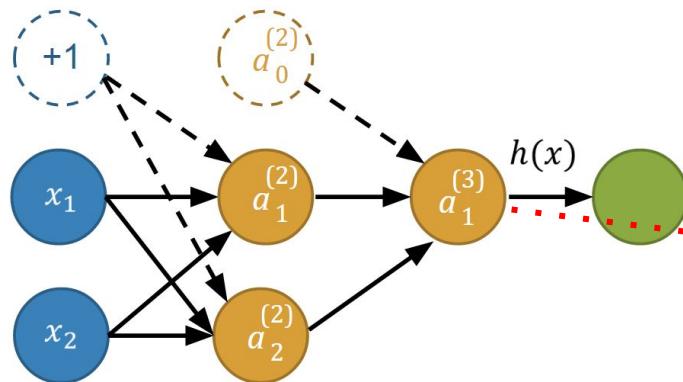

Why does it work?

Why does it work?

Why does it work?

So what can a MLP solve?

“

- ▶ Can approximate any boolean function, with one hidden layer;
- ▶ Can approximate any function with two hidden layers.

Simon Haykin

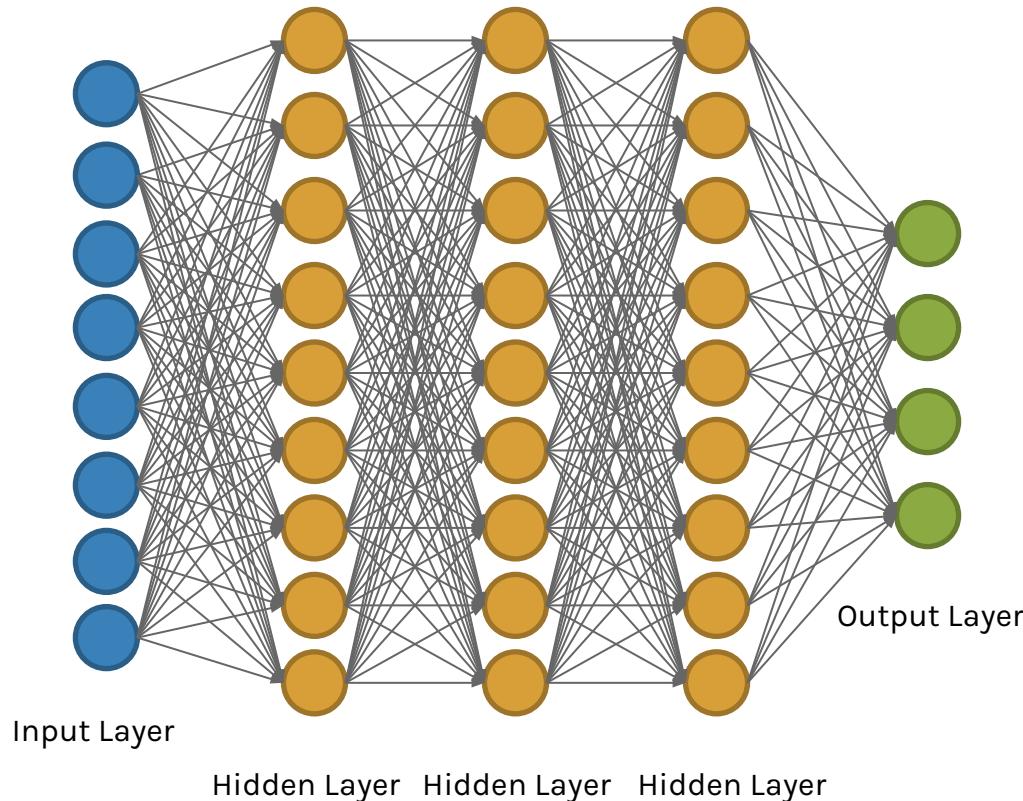

3.

DEEP LEARNING

“

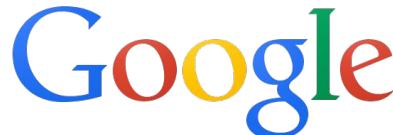

► A machine learning approach that attempts to extract high-level and hierarchical features from raw data.

Deep Neural Network

Where is it used?

- ▶ Speech Recognition;
- ▶ Music Classification;
- ▶ Recommendation;
- ▶ Image Classification;
- ▶ ...

The “creators”

Yann LeCun

Geoffrey Hinton

Yoshua Bengio

AI Winter and the Canadian Mafia

So... why now?

- ▶ Better hardware
 - ▷ GPUs enable ~9x faster training compared to CPUs.
- ▶ High-quality datasets;
- ▶ New activation functions;
- ▶ Regularization methods.

Different Implementations

- ▶ Convolutional Neural Networks (CNN);
- ▶ Deep Belief Networks;
- ▶ Autoencoders;
- ▶ Long Short Term Memory (LSTM)
- ▶ ...

3.1

DEEP LEARNING EXAMPLE

4.

**HOW COULD WE
APPLY IT AT OUR
WORK ?**

But my work
is not about
Machine Learning...

Steps

Start with the problem

Understand your data

Try simple hypotheses first

Evaluating and presenting
results

Start with the problem

Talk to your business contact

Get **insights** about your
problem domain

Ask about hypothetical
features

Be clear about your **intentions**

Do not commit with results!

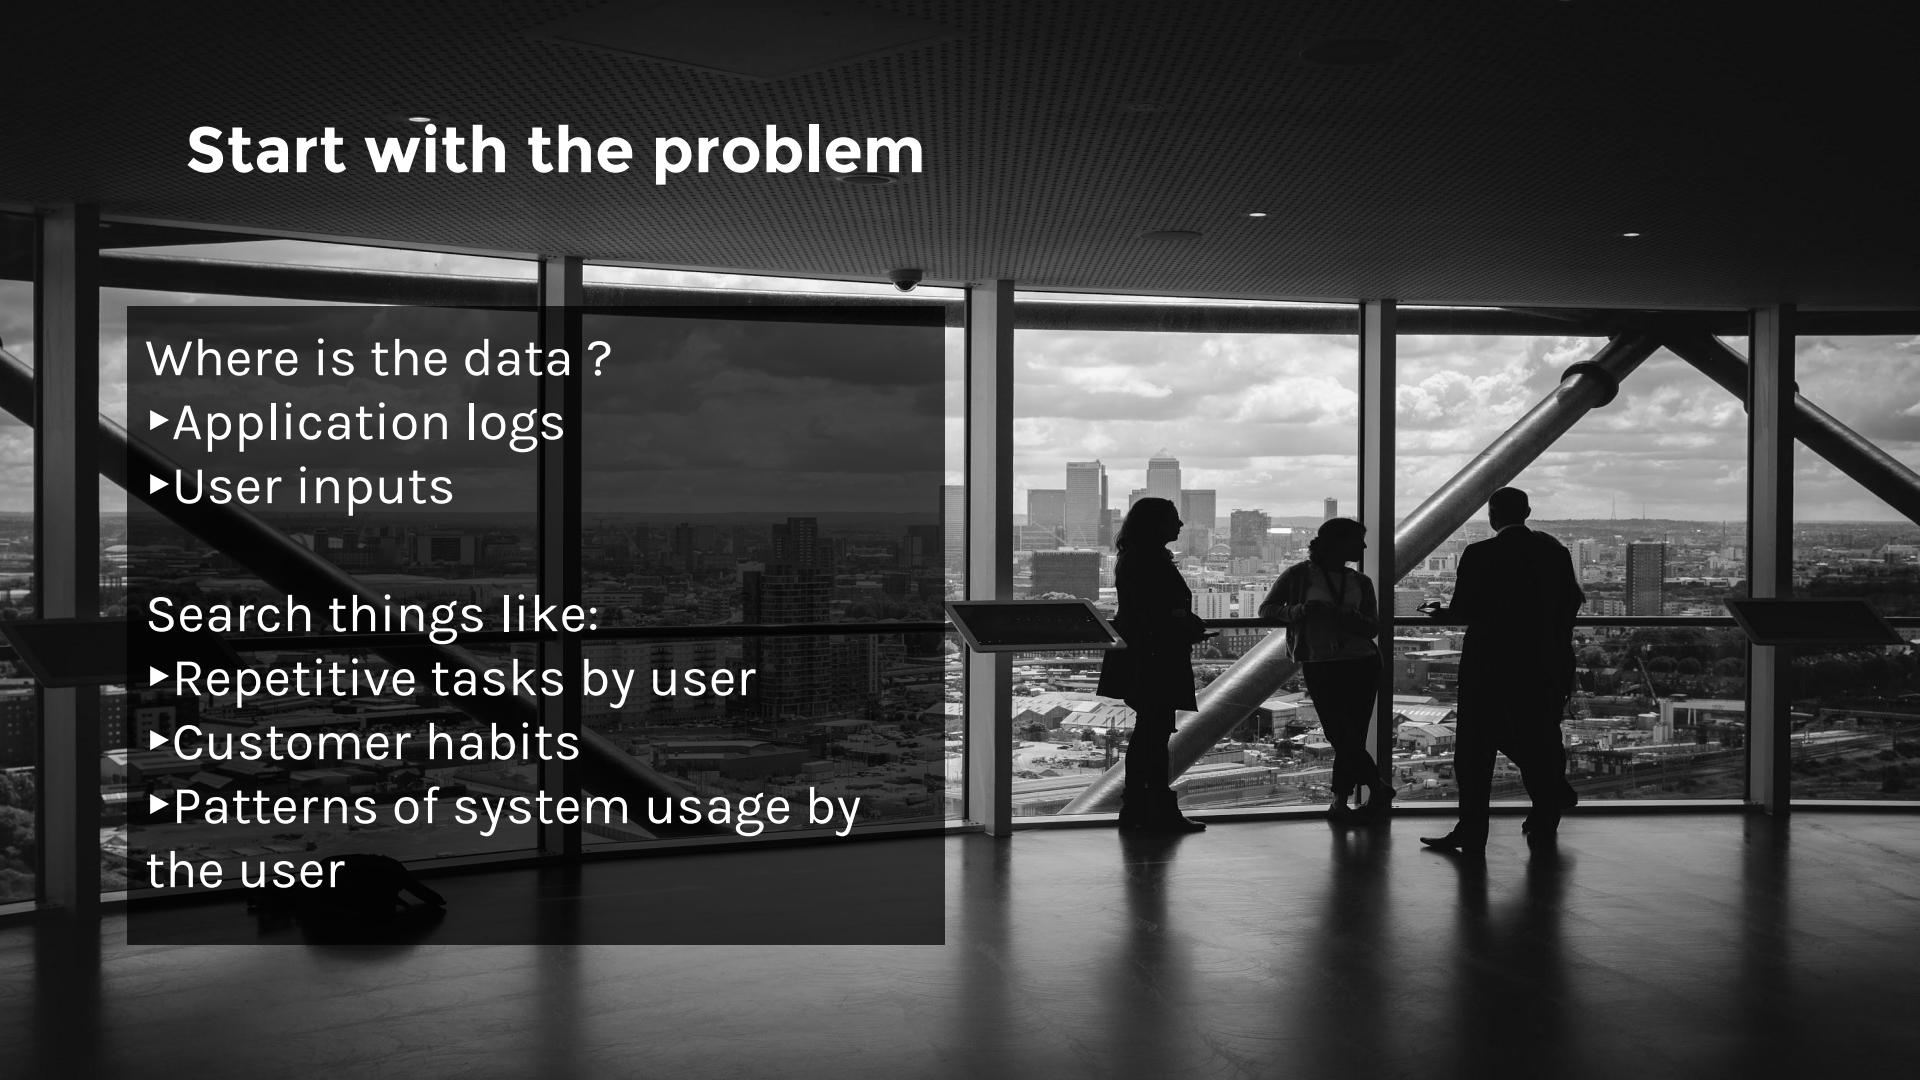

Start with the problem

Where is the data ?

- ▶ Application logs
- ▶ User inputs

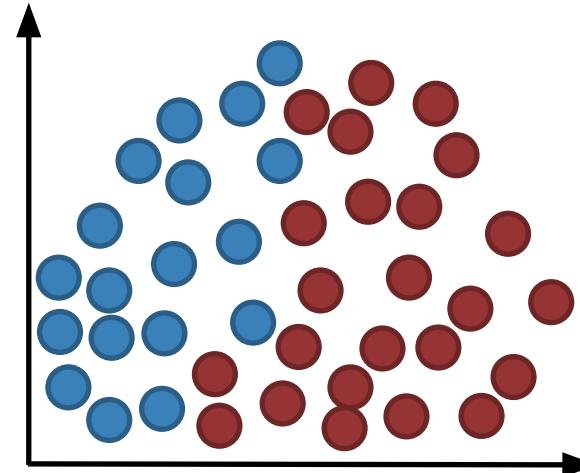

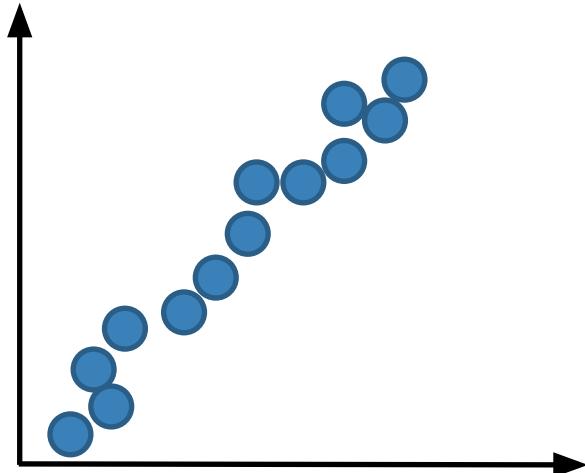

Search things like:

- ▶ Repetitive tasks by user
- ▶ Customer habits
- ▶ Patterns of system usage by the user

Understand your data

- ▶ Explore your data
- ▶ Plot your data
- ▶ Start with 2 or 3 attributes
- ▶ Try to spot some pattern

Understand your data

- ▶ Explore your data
- ▶ Plot your data
- ▶ Start with 2 or 3 attributes
- ▶ Try to spot some pattern

1 tablespoon extra-virgin olive oil

1 tablespoon chopped garlic

1/2 teaspoon kosher salt

**Heat 1 tablespoon butter and olive oil together in
a large skillet over medium heat;
cook and stir zucchini noodles (zoodles),**

Try simple hypotheses first

- ▶ Start with simple hypotheses
 - ▷ Naive Bayes
 - ▷ Linear regression
 - ▷ Logistic regression
 - ▷ K-means
 - ▷ KNN
- ▶ Try more complex hypotheses later
 - ▷ SVM
 - ▷ Random Forest
 - ▷ Neural Networks

Evaluating and presenting results

- ▶ Define a metric based on the business goal
 - ▷ Error rate
 - ▷ F1 score
- ▶ Demonstrate results to business unit
- ▶ Use functional prototypes when possible

Examples

Market Analysis Case

Market Analysis Case

- ▶ Optimize subscription plans
- ▶ Find customer groups
- ▶ **Use and analyze the application log**

application logs:

```
